

# Chameleon USB Developer Guide

Draft Version (Beta 9f)

29/09/16

## 1. Contents

1. Contents.....	2
2. USB Protocol.....	3
2.1. USB ID.....	3
2.2. Packet format.....	3
2.3. Commands.....	3
3. Flash ROM Layout.....	6
3.1. Core Length.....	6
3.2. Core Binary.....	6
3.3. Coreinfo block.....	6
3.4. Additional ROM Data.....	6
3.5. Configuration Data.....	7
4. Fine print.....	8

## 2. USB Protocol

### 2.1. USB ID

Vendor ID	VID	0x18D8	Individual Computers
Product ID	PID	0x201D	Chameleon

### 2.2. Packet format

All USB packets are 34bytes:

Offs	len		
0	1	Command	Identifies the command
1	1	Control	Additional parameter
2	32	Data	Command data

### 2.3. Commands

Often a packet without any specified information in it is returned. This is used to determine when the microcontroller is ready to receive more data and to confirm a command was received.

Command	Cmd	Ctrl	Data	Description												
Status request	0x00	-	-	Reads Status and returns a packet:												
				<table border="1"> <thead> <tr> <th>Offs</th> <th></th> </tr> </thead> <tbody> <tr> <td>0</td> <td></td> </tr> <tr> <td>1</td> <td></td> </tr> <tr> <td>2</td> <td>SPI register</td> </tr> <tr> <td>3</td> <td>FPGA status</td> </tr> <tr> <td>4</td> <td>Bricked status</td> </tr> </tbody> </table>	Offs		0		1		2	SPI register	3	FPGA status	4	Bricked status
Offs																
0																
1																
2	SPI register															
3	FPGA status															
4	Bricked status															

USB Protocol

Command	Cmd	Ctrl	Data	Description												
Read Flash	0x01	-	-	<p>Reads 32 byte from flash ROM using current read pointer and returns a packet:</p> <table border="1"> <tr><td>Offs</td><td></td></tr> <tr><td>0</td><td></td></tr> <tr><td>1</td><td></td></tr> <tr><td>2...33</td><td>Data</td></tr> </table>	Offs		0		1		2...33	Data				
Offs																
0																
1																
2...33	Data															
Write Flash	0x02	0x00	<table border="1"> <tr><td>Offs</td><td></td></tr> <tr><td>0...31</td><td>Data to write</td></tr> </table>	Offs		0...31	Data to write	<p>Writes 32 bytes to flash ROM using the current write pointer and returns a packet containing the flash status register:</p> <table border="1"> <tr><td>Offs</td><td></td></tr> <tr><td>0</td><td></td></tr> <tr><td>1</td><td></td></tr> <tr><td>2</td><td>Flash status</td></tr> </table>	Offs		0		1		2	Flash status
Offs																
0...31	Data to write															
Offs																
0																
1																
2	Flash status															
Sector Erase	0x03	-	<table border="1"> <tr><td>Offs</td><td></td></tr> <tr><td>0</td><td>Sector</td></tr> </table>	Offs		0	Sector	<p>Erases the given sector in flash ROM and returns a packet containing the flash status register:</p> <table border="1"> <tr><td>Offs</td><td></td></tr> <tr><td>0</td><td></td></tr> <tr><td>1</td><td></td></tr> <tr><td>2</td><td>Flash status</td></tr> </table>	Offs		0		1		2	Flash status
Offs																
0	Sector															
Offs																
0																
1																
2	Flash status															
Pointerreset	0x04	-	-	Resets read and write pointers to 0												
Start FPGA	0x06	slot	-	<p>Starts the FPGA from the given slot and returns a packet:</p> <table border="1"> <tr><td>Offs</td><td></td></tr> <tr><td>0</td><td></td></tr> <tr><td>1</td><td></td></tr> <tr><td>2</td><td>Core size (3 bytes, MSB first)</td></tr> </table>	Offs		0		1		2	Core size (3 bytes, MSB first)				
Offs																
0																
1																
2	Core size (3 bytes, MSB first)															
Reset FPGA	0x07	-	-	Reset/Clear the FPGA and enable SPI bus												
Set JTAG slot	0x08	-	<table border="1"> <tr><td>Offs</td><td></td></tr> <tr><td>0</td><td>slot</td></tr> </table>	Offs		0	slot	Sets FPGA JTAG slot to given slot								
Offs																
0	slot															

USB Protocol

Command	Cmd	Ctrl	Data	Description			
Set read pointer	0xB0	-	Offs		Set read pointer to given address		
			0	Addr LSB			
			...				
			3	Addr MSB			
Set Write pointer	0xB1	-	Offs		Set write pointer to given address		
			0	Addr LSB			
			...				
			3	Addr MSB			
Read Chameleon memory	0x90	-	Offs		Initiates reading from the FPGA (RAM) at the given address.  This command is specific to the FPGA core being used and must be supported by it.		
			0	Addr LSB			
			...				
			3	Addr MSB			
Write Chameleon memory	0x92	-	Offs		Introduces writing to the FPGA (RAM) at the given address. Microcontroller returns a packet.  This command is specific to the FPGA core being used and must be supported by it.		
			0	Addr LSB			
			...				
			3	Addr MSB			
Memory write data	0x93	num	Offs		Must follow a 0x92 command. Contains num bytes that will be sent to the FPGA. Microcontroller returns a packet.  This command is specific to the FPGA core being used and must be supported by it.		
			0	Num bytes data			
Write Stop	0x9F	-	-	-	Abort writing. Microcontroller returns a packet.		
Chameleon version	0xF0	-	-	-	Microcontroller returns a packet:		
						Offs	
						0	
						1	
						2	SD-Card present
3	Firmware version						

---

## USB Protocol

---

<b>Command</b>	<b>Cmd</b>	<b>Ctrl</b>	<b>Data</b>	<b>Description</b>
Start Bootloader	0xF1	-	-	Start the bootloader of the Microcontroller

### 3. Flash ROM Layout

The Flash ROM of the Chameleon is organized into 16 blocks of 1MB, which each may contain its own FPGA Core (which can be started from the Turbo Chameleon 64 Main Menu). A core binary may be followed by additional ROM data.

#### 3.1. Core Length

Offset	Length	
+0	3	Offset to first byte behind Core (and Coreinfo) → ROM Offset

#### 3.2. Core Binary

Offset	Length	
+3	N	Core Binary Data (.rbf) with their bits reversed

#### 3.3. Coreinfo block

Offset	Length	
+3+N	4	Magic (“ch64”)
	4	Version (0x00000001)
	4	Core length
	4	Core offset
	4	ROM length
	4	ROM offset
	0x40	Core name
	4	Info length
	4	Info offset

offset and length of this info block come always last so they can be found by seeking backwards from the rom offset which is given as the first 3 bytes before the core binary.

#### 3.4. Additional ROM Data

Offset	Length	
+3+N+0x60	M	ROM Binary Data

Currently the size of the chameleon ROM is max. 0x090000 bytes (9 64kb blocks)

### **3.5. Configuration Data**

The last 64k Block of the 1MB slot is reserved for configuration data

Offset	Length	
0xf0000	0x10000	Turbo Chameleon 64 Configuration Data

## 4. Fine print

The Chameleon is not designed, authorized or warranted to be suitable for use in life-support devices or systems or other critical operations. Inclusion of the product in such applications is understood to be fully at the customer's risk.
