## NEXT ISSUE

**SHOW MUSIC:** Some surprises for the Commodore show.

**MORE MUSIC:** How far have you got with our keyboard project? In our June issue we recap the project so far and show how to display your keyboard on the screen.

**MORE MOUSE:** The next in our series on building your own robot mouse.

# Now the Commodore 64 means business

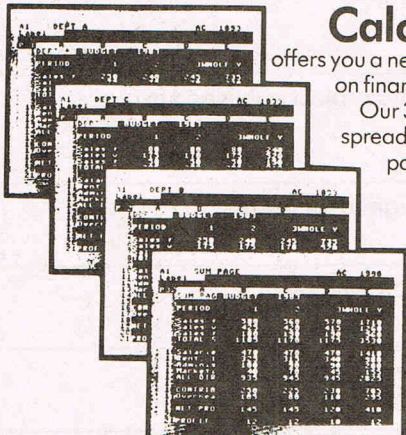

The Game's over. Wouldn't you like to increase the applications potential of your Commodore 64? Transform it from a fun family computer into a truly professional tool? Now — thanks to Handic, the world's largest creator of Commodore software — you can give a powerful new dimension to your 64's performance. We have pioneered a new program called **CALC RESULT** that dramatically expands the financial planning potential of your Commodore.

Doctors, Dentists, Lawyers, Bankers, Brokers and other money managers exploit it to keep track of complex client accounts. Builders, Garage Owners, Retailers of all sizes, and

descriptions now use the spread sheet formula for instant feedback and analysis of trading results. In a world where ease of access and speed of assessment are essential, **CALC RESULT** gives everyone the power to harness the untapped potential of their Commodore.

**CALC RESULT** is versatile... use it to calculate loan and mortgage payments, forecast budgets, balance cash flow, monitor stocks and shares, plan personal and corporate taxation, check expenses, log and analyse all kinds of bills.

**CALC RESULT** instantly translates figures into multi-coloured bar charts. It has a built-in 'HELP' function and is absolutely accident proof.

**Calc Result** offers you a new perspective on financial planning. Our 3-dimensional spreadsheet sums up pages of figures in one easily understood financial model.

**£99.00** (inc.VAT)

## Calc Result Advanced

All functions in **Calc Result Easy** plus 32 pages (Three-dimensional viewing). Page add, window, split-screen (up to four pages on the screen at the same time), and help functions.

Delivered on plug-in cartridge plus disk. Requires disk drive.

For more information contact our Advisory Centre on 0344-778800 or simply contact your local Commodore or Lightning dealer, or clip the coupon.

**£49.95** (inc.VAT)

## Calc Result Easy

Single page spreadsheet (64 columns x 254 rows). Built-in graphics. Formula protection, flexible print-out, colour conditional functions and mathematical functions. Delivered on plug-in cartridge. Data storage on cassette or disk.

I would like you to send by return post further information on the CC2 Handic 64 range.

Thinking ahead

## Ping-Pong Housing

Robots already look set to take over all our manual labour, but now it seems that they are about to take over our leisure as well! A Ping-Pong (table tennis) competition has been announced, not for humans but robots.

The Steering Committee of the International Personal Robot Congress and Exposition (IPRC) have accepted a British challenge for the tournament which is to take place in 1986.

Dr John Billingsley of Portsmouth Polytechnic conceived the idea and contest organisers believe that the sensor technology enabling robots to 'see' the ball and then return it to their opponents will become available in the next two years. It is also expected that most of the 'competitors' will be built by enterprising individuals rather than by large manufacturers.

Trials for the selection of the American team will take place at IPRC '85.

A special scaled-down version of a Ping-Pong table has been designed for the competition, with a frame at either end. Above the net is another 50cm square frame to outlaw the unsportsrobotlike practice of lobbing the ball out of view of the opponents sensors!

For information on the IPRC **contact:** IPRC, 777 Locust Street, Denver, Colorado 80220.

For information on the contest itself **contact:** Dr John Billingsley, Dept of Electrical and Electronic Engineering, Portsmouth Polytechnic, Anglesea Road, Portsmouth.

Advances in Microtechnology, particularly in microelectronics, are having considerable effects on the design of homes. The number of people working from home has risen dramatically in the last few years and few homes are built to encourage working activity.

In the last decade public and private housing have been at least 10% smaller in area than in the '60s and the Housing Associations Charitable Trust are concerned that everyone in the Housing Industry should realise that there will have to be changes in housing designs in the UK.

## Concept

Lion House, a new computer retail centre is launching a new concept in selling micros to the business and home markets. The redecoration of their Tottenham Court Road premises is just being completed and it will be renamed Micro Systems.

Spread over five floors, Lion plan to have several different sections including departments concentrating on hardware and accessories for the home market; business systems; an advisory centre for first time buyers; a fifty seat lecture theatre for seminars and training and a press centre with free database and word processing facilities.

**Contact:** Lion House, 227 Tottenham Court Road, London W1P 0HX. Tel: 01-580 7383.

## In the Pipeline

Marshall Smith, the new president of Commodore has been planning some interesting moves since he took over from Jack Tramiel. Commodore have signed a technology

licensing agreement with the manufacturers of Hyperion, a IBM compatible machine and by the end of this year Commodore are hoping to have their own IBM compatible machine in production.

## CBM packages

Commodore are trying to consolidate their position in the microcomputer business market by offering five packages with considerable price reductions to cover every size of business.

Each package includes hardware, software and peripherals necessary to satisfy the demands of most businesses. The five packages available are as follows:

A 700B computer and monitor, SFD 1001 single disk drive, 4023 printer, cables and three software packages (Superscript word processing systems, Superbase filing system and Calc Result spreadsheets) reduced from £2,713 to £1,495.

A 700B computer and monitor, SFD 1001 single disk drive, 6400 printer plus cables and three software packages (Superscript, Superbase and

Calc Result) reduced from £3,363 to £1,995. A 7105B computer with integral monitor, 8250 dual disk drive, 4023 printer, cables and three software packages (Superbase and Calc Result) reduced from £3,204 to £1,975.

A 710B computer with integral monitor, 8250 dual disk drive, 1361 printer, cables and three software packages (Superscript, Superbase and Calc Result) reduced from £3,484 to £1,995.

A 710B computer with integral monitor, 8250 dual disk drive, 6400 printer, cables and three software packages (Superscript, Superbase and Calc Result) reduced from £3,854 to £2,495.

**Contact:** Commodore Information Centre, 675 Ajax Avenue, Slough, Berkshire SL1 4BG. Tel: 0753 79292.

## Welcome

Kenneth Baker MP, Minister of State for Industry and Information Technology, recently welcomed Commodore's decision to open a factory in Corby. He said: "Regional financial incentives have been used in a constructive way to help this project go ahead in Britain and bring the benefits of a significant number of new jobs for Corby and a welcome addition to our growing information technology related industries."

Commodore's Corby factory is Europe's largest microcomputer factory, creating 600 jobs this year with an additional 400 jobs being generated as the factory gears up production.

Production commences in September. The factory will initially produce 200,000 microcomputers a month and has the expansion capacity to produce over 350,000 units a month. Two-thirds of production will be exported to Europe and countries such as Australia and the Middle East.

## Talk

A two-day conference discussing how to avoid losses through piracy is being organised by Business Research International. It will take place at the Park Lane Hotel, London on June 4-5.

Subjects on the agenda include: specific steps you can take to combat piracy; what your rights are in law; when to use litigation - a cost/benefit analysis; why protection should be treated as an investment; the latest technology available to protect your programs; how proposed changes in legislation will affect your position; what new protection problems may be created by knowledge based systems; plus two case studies.

The cost of this conference is £396.75, with a 10% reduction if two or more delegates attend.

**Contact:** Business Research International, 57/61 Mortimer Street, London W1N 7TD. Tel: 01-637 4383.

(f) 1526 printer	£310	to 64/Vic20 use	£ 15	(Offers subject to Commodore supply)	
(g) Epson FX80	£400				

Prices include VAT. Carriage is free except on credit orders. A full range of hardware and software is available by mail from us. Ask for prices and details. Alternatively, visit The DGH Software Centre's new shop at 10 North Street, Ashford, opening end of May. A full range of books also available by mail order at normal retail price plus £1 p&p.

# software selection

Please note that the prefix (d) before a price denotes that the program is available on disk (for example d25). The prefix (r) (as in r29) indicates that the program is in cartridge form and costs £29.00. Tape program prices have no prefix. Thus (d29) indicates a disk version at £29.00 and a tape version at £16.00.

## WORD PROCESSING

**PAPERCLIP** (d90) is the most sophisticated and versatile wp program for the 64. Very good too is **VIZAWRITE** (r78 d65) which also has a spell-check program **VIZASPELL** (d20 if bought with VIZAWRITE, else d65). But for casual wordprocessing of extreme sophistication we recommend **HOMEWORD** (d35) which is outstanding value and very easy to master. It uses 'icons' to symbolize menu options (as used by Lisa). Contains several really innovative features. Much further down the scale but ideal as a low cost text editor is **WORD WIZARD** (5.99). Compatible labelling programs are available.

## UTILITIES

**DISKEY** (d36) is a really powerful disk editor which enables you to manipulate fully your 1541 and files produced on it. **PROGRAMMER'S UTILITIES** (d14.99) surely represents the best value if you have a disk: sprite, character, and sound editors are provided in addition to a PET emulator, and disk copy utilities – a dozen in all!

**COMPACTOR** (d10.50 8.50) cuts out all wasteful programming including REMs and spaces. This can speed up programs and salvage memory. Various good quality sprite and character editors are available including **SUPERFONT 4.0** (6.75) **SPRITE/GRAPHICS EDITOR** (5.99) **SPRITE MAKER 64** (6.75). On the music side there's **MUSIC COMPOSER** (r9.99) **ULTISYNTH** (14.95) and **SYNTHESOUND** (r25 d25). If you have a lot of tape-based software, **DISCO** (c9.95) can be used to transfer much of it to disk – this is a truly powerful utility which is the best of its type. **KOALAPAD** (75) is an outstanding hardware accessory which enables you or your children to create wonderful screen pictures which can be saved and displayed independently – requires **KPAINT** (d20). Other 'pad' software also available.

## PROGRAMMING AIDS

These range from improvements to C64 BASIC to actual programming aids. **SIMONS BASIC** (r50) adds 114 extra commands and facilities, and the rather better planned program **BC BASIC** (r50 17.95) does much the same. Best of the compilers and excellent value is **PETSPED** (d50). On the machine code front there are numerous monitors and assemblers the best of which is **MIKRO ASSEMBLER** (r53) but **MONITOR** (r29.95) **ASSEMBLER 64** (6.75) **ASSEMBLER DEVELOPMENT** (d24.95) **HESMON 64** (r29) **MASTERCODE ASSEMBLER** (14.95) can all be recommended. If you want to learn about machine code programming we suggest **ASSEMBLER TUTOR** (d29.95 29.95) or Honeyfold's **BEGINNER'S ASSEMBLY LANGUAGE PROGRAMMING** (14.95) If you plan writing your own database programs highly recommended are **CODEWRITER** (d85) and **THE LAST ONE** (d97) which both produce stand-alone code.

## DATAFILES/DATABASES

Unquestionably the one program to have if you can afford it is **SUPERBASE 64** (d88) which we have on special offer by way of encouragement! This is a sophisticated programmable relational database. Think of what you would like your database program to do – and **SUPERBASE** will probably be able to do it! Very, very powerful and very, very versatile. **INFODISK** (d73) and **DELPHI'S ORACLE** (d90) are very similar and offer larger individual records but more restricted programming constraints. Multifunction database/wordprocessors include the excellent **MAGPIE 64** (r95) **INFOMAST** (d90) and **VIZASTAR** (d99). All these programs are capable of serious disk-orientated business applications. **DIARY 64** (r30) is a really excellent 'single page' datafile for tape or disk records.

## FINANCE & BUSINESS

**CALCRESULT** (d95) is a very sophisticated 3D spreadsheet we highly recommend for serious business uses. **PRACTICALC** (d40 35) is very good value. Also: **FUTURE FINANCE** (d75) and **BUSICALC 2** (d79 77). For home accounts there's **BANK MANAGER** (d10 7.50) **HOUSEHOLD FINANCE** (21) **MONEY MANAGER** (9.99) the very sophisticated **HOME ACCOUNTANT** (d52.50) **TIME & MONEY MANAGER** (d49). Business account programs are available also. These usually form part of a suite of related business programs. For a low cost example **BUSCOM-1**, **BUSCOM-2**, **BUSCOM-3** and **BUSCOM-4** are for monthly accounts, wages, retail accounts, and stock system respectively (all d21 19 – demonstration versions at d4.50 2.50 each). Expensive and sophisticated alternatives are also available. For VAT record-keeping and a full audit trail we unreservedly recommend **MICRO SIMPLEX 64** (d175). A very professional program with full product support. Suits Schemes A to F. Demo available.

ACCESS/VISA credit card hot-line:

(0227) 266289

If answering machine is in use be prepared to state program name, your credit card number and expiry date, your address and telephone number.

This is a selection of some of the best programs for the Commodore 64 from a list of over 800 we can supply, covering the products of 100+ software houses from the UK, rest of Europe and the USA. A 20-page listing and later updates are available free to customers (otherwise 50p and large SAE. Add 50p p&p for orders under £20. (Europe £1 on each item of software).

## RECREATIONAL

We can supply any of the popular games from established software houses and this includes an unbeatable selection of imported material. If there's a program for the 64... we can usually provide it! Look out for **ALICE IN WONDERLAND** (d27) and the definitive **C64 FLIGHT SIMULATOR II** (d35). Really good imports include **BLUE MAX** (d29 29) which has truly outstanding graphics and diagonal scrolling like **ZAXXON** (d29 29) which is at last available. There's also **PROTECTOR II** (d25 25) **FORT APOCALYPSE** (d23 23) **PITSTOP** (r27.50) **JUMPMAN** (d27.50 27.50) and **JUMPMAN JUNIOR** (r27.50) ... but there are many others! Interested in adventuring? Highly recommended are the following: **COLOSSAL ADVENTURE**, **ADVENTURE QUEST**, **DUNGEON ADVENTURE**, **SNOWBALL**, **TIME LORDS** and **TWIN KINGDOM VALLEY** (all 9.50 each) **THE HOBBIT** (14.50), plus Infocom's **ZORK I/II/III**, **STARCROSS** (all d29 each) **WITNESS**, **DEADLINE**, **SUSPENDED**, **ENCHANTER**, **INFIDEL**, **PLANETFALL** (all d36 each). A good range of Commodore cartridge software is now available – best of these is **INTERNATIONAL SOCCER** (r9.99). **CP/M** (rd 60) gives you the benefits of the Z80 processor and a full operating system. **PILOT** (d65) is an outstanding tool and authoring language for creating educational programs with ease. **LOGO** (d39.95) also now available.

Our list includes details of **EDUCATIONAL**, **ACCOUNTING**, **BUSINESS** and **GAMES** programs not possible to itemize here. PLEASE TRY US IF YOU ARE HAVING DIFFICULTY LOCATING A PROGRAM. Please make cheques/PO's payable to the Six-Four Supplies Company.

# RICHARD SHEPHERD SOFTWARE

## A HOME BUDGETING & BANKING SYSTEM THAT REALLY MAKES YOUR COMMODORE 64 WORK!

**NOW ON CBM 64 DISK AND CASSETTE**

A professional style multi function Cash Controller program. In disk format you can load, and make an entry ... or update your existing records ... in just seconds. This easy to use program can handle up to 400 transactions, giving instant statements of your bank balance. Now there's no excuses for going into 'the red' and paying unnecessary bank charges!

### BANK ACCOUNT

- Statements on demand from any date to date.
- Holds up to 400 transactions.
- Standing order facility.
- All transactions can be automatically coded to allocate up to 16 budget headings.
- Search facility for any single item by description or amount.

### HOME BUDGETING

- 16 budget headings, e.g. Gas, Rates, Car, Tax - you can choose the headings
- Highlights under/over spending
- Full budget expenditure breakdown
- Budget "re-think" facility

### LOAN/MORTGAGE CALCULATOR

All you ever wanted to know but didn't like to ask! Calculates:

- Interest rates
- Payback periods
- Capital sum
- Period of loan

- PRINTOUT FACILITY
- FULL SECURITY WITH PERSONAL PASSWORD
- SAVE DATA ONTO CASSETTE OR DISK

Available from good computer stores or direct by mail order...  
**at a price that won't upset the Bank Manager!**

## The Rotronics Portable Case

Here is the ideal portable work station for home, school or work. Specially made for most home microcomputers, it contains your VIC 20 or CBM 64 within a smart executive style case with removable lid for convenience in use.

The individually tailored foam insert securely protects your micro and cassette recorder (both types) during

transit. Additional storage space in the lid holds manuals and up to twenty cassettes. A scalpel is provided to modify the insert for expansion units and an alternative insert can be supplied if you change your hardware in the future. The case is also available with uncut foam inserts.

All components remain fully operational within the case via inter-connections

routed between the double layers of foam, so there are no unsightly leads.

This is the first case designed for easy use with each component positioned for convenient operation. The overall dimensions are 138mm x 700mm x 363mm.

### VIXEN RAM Cartridge

Versatile unit with switchable memory blocks. Allows standard 16K BASIC memory expansion, or RAM to be relocated for machine code use. Two VIXENs may be combined (using the Motherboard) and set so as to fully expand the VIC to 32K. £34.45 (p+p 50p)

### VIXEN Motherboard

Allows up to four cartridges to share the VIC 20 expansion connector. Switches allow two of these ports to be switched in or out, or to be relocated in memory. The VIXEN also incorporates a socket which accepts software in PROM form: a utility PROM is already available (not supplied) which adds 18 new and useful commands to VIC BASIC. £31.95 (p+p 50p)

### Order Form

## Paint pic

Paintpic, a complete colour drawing and painting program for the 64 is now available from Kuma Computers for £19.50.

Available on cassette, the program can draw in three modes – pen, brush and text and it can draw both curved and straight shapes – circles, arcs and triangles for example. Pen, bristles, borders and background colours can be set. There are a number of selectable features including eight storable brushes, graphics characters and tilted shapes.

**Contact:** Kuma Computers Ltd, 12 Horseshoe Park, Pangbourne RG8 7JW. Tel: 07357 4335.

## Show

Walthamsoft '84, a home computer show, is being held in the main hall of Waltham Forest Technical College, Forest Road, Walthamstow, London E17 on Saturday May 19.

It opens to the public from 10am until 5pm and the admission fee will be £1. Stands exhibiting software, hardware, peripherals and allied electronics will be among the attractions. Walthamstow is easily accessible by public transport and there is ample parking space for cars.

## Data 20

The Data 20 interface from Impex connects the 64 or Vic 20 to a parallel printer and costs £54.95.

It will work with printers with programmable character sets and will disable ASCII conversion. Supporting the Commodore handshaking protocol, the interface appears to the system as a 1525 printer. It generates its own power by using a small amount of energy from the signs passing to the printer from the computer.

**Contact:** Impex Designs (UK) Ltd, Metro House, Second Way, Wembley, Middx. HA9 0TY. Tel: 01-900 0999.

## 64 centre US supply

Griceglen, a software centre specialising in products for the 64, has opened in London. It is stocking all sorts of items ranging from business applications – accounts, database systems and spreadsheets to programmers aids, books and utilities – games and educational programs.

Product Demonstrations and after sales support for business customers are also available. The centre aims to keep adequate stocks up and currently have over 200 different items.

**Contact:** Griceglen Ltd, 26 Red Lion Square, London WC1V 4RL. Tel: 01-242 9462.

The North American division of Precision Software have signed with Commodore to supply Easy Script and Easy Spell as the standard word processing packages for the new 264 and V364 series. At present, these will only be available in North America.

Optional voice synthesis on the V364 means that commands and error messages can be spoken as well as written on the screen. There are also a number of enhancements designed to take advantage of the additional facilities on these models. Easy Spell will also feature more technical words.

## Programs

Handic Software have produced a number of programs which they hope will boost the commercial applications of the 64 and also a catalogue listing products available for all of the Commodore Computers.

Among the software produced is the MON 64, a Machine Code Monitor on cartridge and REL 64 which turns the 64 into a remote Command and Control Centre – activating burglar alarms, lamps, telephones, and televisions.

**Contact:** Handic Software, 5 Albert Road, Crowthorne, Berkshire RG11 7LT. Tel: 0344 778800.

## Hold-all

Ever had problems transporting your 64 or VIC 20 and the various peripherals around the country? If you have, then read on because Rotronics have designed a computer case which will hold everything – the keyboard, cassette recorder, power supply, leads and even the manuals. It retails at £34.49 plus £2.50 p&p.

It weighs about 3.5Kg when

empty and is about 690 x 360 x 140mm in size. Foam inserts protect the equipment, keeping it secure, and the case has black leather-look sides, aluminium extrusions and chrome-plated locks and hinges.

**Contact:** Rotronics Ltd, 29 Octagon Parade, High Wycombe, Bucks HP11 2HX. Tel: 0494 449623.

## Budgeting

Kuma Computers have at last released a 64 version of Home Budget for £9.95.

Designed to help keep track of home finances, it builds up a file of incomes and expenditures and produces tabulated reports or bar charts on these. It also has a facility to do "what if" calculations. Up to 12 categories of expenditure and three categories of income are defined and all data can be logged for date and time.

**Contact:** Kuma Computers, 12 Horseshoe Park, Pangbourne RG6 7JW. Tel: 07357 4335.

## Twin pack

BASF are launching a twin pack of disks, providing an alternative to the traditional box of ten.

Four types of 5¼ inch disks will be offered in the new packaging: single and double-sided versions of both double density and quad density flexy-disks. A cross reference chart on the reverse will aid potential buyers to select the right disk.

**Contact:** BASF, 4 Fitzroy Square, London W1P 6ER. Tel: 01-388 4200.

# Mice, mazes and micros

**"Eeek! A mouse!" might not be quite the appropriate response to the mice which will be appearing at the Computer Fair although the 'chips on wheels' bumbling their way round a maze might well produce a puzzled reaction from onlookers. Here, John Billingsley, who might be regarded as the cat's whiskers of the Mouse Movement, looks at the Euromouse competition.**

First, a word of explanation for the uninitiated. A micro mouse is basically a mobile chip. It's a machine that's capable of finding its way round a maze by using logic.

The Euromouse contest was first proposed just five years ago – it seems much longer. IEEE Spectrum magazine had launched its Micromouse contest in the USA; could a similar contest be used to lend light relief to the Euromicro conference planned to take place in London in September 1980?

A press announcement brought a deluge of enquiries, and the contest was on. Then the real problems started. Spectrum printed an account of a contest with a simple maze, where dumb wall-followers found the corner exit in record time. Machine intelligence was left standing. How could the Euromouse maze pose a real challenge to 'intelligent' mice?

The answer was to put the target at the centre, and to surround it with a 'moat' of passages, so that a wall-follower would merely arrive back at the start. Just in case this proved too simple, a 'cat hunt' and a 'virtuoso display' were added as extra classes.

A practice heat was organised at Portsmouth Polytechnic for July 1980. As the day approached the mice seemed to have been smitten by a plague. From 20 mice in construction their numbers shrank to ten, then seemed in danger of approaching zero. Frantic telephone calls imploring builders to bring anything that moved succeeded in gathering just five mice for the contest.

The mice were outnumbered by the Japanese delegation researching a contest of their own, and by the television crew bent on filming the marvels of robotics. One mouse was able to navigate a corner, and might

perhaps have found the centre but for a defective sensor. One ricocheted from wall to wall and made progress by Brownian motion. (These were the 'home team' of Portsmouth Polytechnic final year projects). An industrial entrant representing several thousand pounds of effort could only spin on the spot – the result of a last-minute 'improvement' to an interrupt routine. Another 'big league' mouse entertained the audience guided by two switches and an embarrassed builder. A school-built entrant covered all of six inches before its wrongly connected feedback rammed it into the wall.

Despite all this the practice was enormous fun, and the greater the chaos the more the audience and the TV presenter seemed to enjoy it. Nevertheless it was with some trepidation that I looked forward to September!

The Euromicro final was a different matter. Nine mice arrived, all potential contenders for the championship (except one which refused to move). Some sported furry coats, one sang with a raucous voice, one was built from Lego bricks. A Swiss mouse had ingenious wheels of which the 'tyres' were themselves cross-pivoted wheels, allowing the mouse to move in any direction without turning.

A Finnish mouse, Midnight Sun, could play Beatles tunes and write its name. But only one mouse, a modest clattering tin contraption with mechanical paddle sensors, succeeded in reaching the centre knowing that it had arrived there. This was Nick Smith's 'Sterling Mouse', still occasionally to be seen in action to this day.

Following an Easter 'fancy' hosted by ICL's amateur computer club, the 1981 British finals were held at the Online exhibition at Wembley Conference centre. Fifteen mice now arrived from Britain alone. The BBC 'Computer Programme' series has immortalised

Quester's brainless bumbings, and two new mice made their historic debuts. These were Thumper, a square machine which switched the directions of all four wheels to change direction without turning, and Thezeus.

Cardboard and balsa-wood featured largely in Thezeus' construction, with model-aircraft seros proclaiming Alan Dibley's other hobby of model gliding. A sawn-off ZX80 provided computing power, and Thezeus turned by lowering a circular plate to the floor, lifting its wheels and spinning on the spot, meanwhile using cotton strands to hoist in its thin wire sensors.

The mouse builders were a lively bunch, and attached so much attention from visitors to the show that other stands complained of the disturbance – that was the last time the Mice were invited to Online.

September 1981 found fifteen mice competing in the Palais de la Decouverte in Paris, and David Woodfield's Thumper established itself as champion. Mice could now be relied on to find the centre, and the contest was becoming transformed from a puzzle to a race. A 'first' at Paris was the participation of a school team – although their mouse arrived as a kit of parts in a carrier bag, and did not exactly cover itself in glory.

In 1982, Practical Computing's 'Computer Fair' at Earls Court played host to the mice for the British Final. Two new Thezeii arrived, to relegate Thumper to third place, whilst several promising novices made an appearance. The planned European final was to be held at the Euromicro conference in Haifa, but affairs in the Lebanon changed all that. Tampere University in Finland stepped in as hosts in the nick of time – and then won first place with Microsaurus by a margin of two seconds.

1983 became the year of the school teams. They didn't win – by a long chalk

— but their performance at the Computer fair won them sponsorship to take part in the finals in Madrid. The top mice were taking on a new shape. Steered tricycles emulating an earlier Thezeus, they concentrated on clearing corners without faltering, and the winning mouse reached the centre in just over thirty seconds. Again the winner was a Finn from Tampere.

This year's heats will again be held at the Computer Fair, the start of a trail which could lead to Japan. T5 should be unveiled by Alan Dibley, and David Woodfield threatens a successor to KnownAim, in turn much faster than Thumper. Hopefully the winner will be sponsored to the Euromicro Final in Copenhagen in August, where the European winner has been promised an

expenses-paid trip to compete in Japan in 1985.

Nick Smith's original 1980 algorithm for solving the maze still holds good today, and the challenge is more one of good engineering, reliability and tolerance to disturbances than one of conundrum solving. It is a challenge which will hold good for many years to come, perhaps with an increasing schools participation. So what sort of contest can baffle the experts?

Next year will see the introduction of a Robot Ping-Pong contest. It's not as impossible as it sounds. The table is two metres long, but only half a metre wide, so the bat movement is restricted to a reasonable range. The ball must bounce once and leave the table through a frame half a metre square, so lobs and slams

are kept in check.

The ball is served automatically from a position in full view above the net, so the vision task is only one of tracking, not of spotting the ball. The net is quarter of a metre high, slowing down the game to a third of a second or so for the journey down the table, and at 12.5 cm diameter the bat covers a substantial part of the playing frame area. I don't say that the contest will be easy, but several teams are well under way with their construction.

The first aspect of the contest is a race to claim the best names — CY Borg and Machineroe have already been christened. If you would like to compete in Mouse or Ping-Pong contest, please contact me at Portsmouth Polytechnic Department of Electrical Engineering, Anglesea Road, Portsmouth PO1 3DJ.

# Build a robot mouse

The first part in a series on the circuitry and software required to control a robot

The idea of building a computer controlled robot is very appealing. What usually stops people constructing such machines is the design and construction of the hardware. Building robots requires a range of different skills: computing for the control software, electronics for the control hardware and mechanical construction to build the mechanical base of the machine. To simplify these problems the robot design should be kept as basic as possible. The simplest form of robot is the mobile or "turtle" robot.

A turtle robot has a very simple mechanical base and consists of a rectangular perspex plate to the front end of which are attached two small five volt DC motors. These motors directly drive small model airplane wheels. In the centre of the rear end of the plastic base plate is a small furniture castor.

The construction is very simple and for the "turtle" shown on the front cover of this magazine all the mechanical parts were bought from a model shop for just a few pounds (except the castor which came from a hardware store). Construction tools were confined to a sharp knife, a small hacksaw, a ruler, and plastic cement.

Having constructed a mechanical

base, the next stage is to build the motor drive electronics. These are relatively simple to construct and the dedicated experimenter will find the circuits useful for controlling a whole range of power devices.

The simplest and cheapest type of robot motors are the small, low-voltage DC motors sold in model shops. Such motors usually run on five or six volts at 750 milliamps and can thus be conveniently powered by a rechargeable battery onboard the robot. The usual cost of such motors is £2. For about £10 you can hire small DC motors with

integral gear boxes which are preferable for robots.

Two controls are required for a DC motor — speed and direction. Speed can be controlled by changing the supply voltage, and direction of rotation by switching the polarity of the motor power supply. In order to perform both these functions we need a simple switch circuit which will allow the computer to control the DC load in a small motor. Additional circuitry is also required to protect the computer if high voltages are used.

# Consider our s professional

If you ever have to bring work home from the office you can now tackle it in a fraction of the time, thanks to our range of software.

With these inexpensive new programs you can turn a Commodore 64 personal computer into a fully-fledged business tool to improve the smooth operation of your calculations, filing and ordering or information storage.

All the programs are easy to learn and use, and all cost less than £50.

There's no more cost effective way to turn your home computer to practical use.

## Practicalc 64. The complete spreadsheet for Commodore 64.

With this program your cashflow will do just that.

Flow.

Practicalc 64 accepts both numerical and alphabetical entries and allows you to work out sales forecasts, long-term budgets, sales models or long term cash plans.

All in a fraction of the time they normally take.

Practicalc 64 has 2000 cells, more than 20 mathematical functions, (including logarithms and roots), can insert or delete rows or columns, can 'SORT' information alpha-numerically and has a 'SEEK' function to search for specific information.

It can even display the information in graph form to allow a quick visual appraisal of the situation. Disc £44.50 (Tape £39.95).

Over 20 mathematical functions.  
Column width up to 38 characters  
2000 cells.  
Graph function.

## Practifile 64. The database for Commodore 64.

Practifile means an end to bulky and time-consuming storage of files, client or patient information or names and addresses.

And it means you'll no longer have to spend minutes or hours searching through piles of paper for a specific piece of information.

Each file on the program is able to handle 3,800 record entries, and Practifile can sort the files it contains by number or letter in less than a second.

The system is so flexible that you can add, subtract, multiply or divide within individual files, while its use with a word-processing system means that you

Sorts files by number or letter in less than one second. Fully compatible with Practicalc 64.

# oftware from a point of view.

can have instant 'hard-copies' in a matter of minutes.

While Practifile means instant access to mailing lists.

At just £44.50 you won't find a more versatile, flexible and professionally useful data-base.

## Inventory 64. The quick, reliable inventory system.

With its capacity of 650 items, Inventory 64 is ideal for the average small business, and means a vast improvement in the efficiency of good stock control.

All you have to do is to enter each item, followed by the information which the program will prompt.

That means things like part number, description,

Handles up to  
650 parts.  
The quick answer  
to stock control  
problems.

location, stock, year-to-date sales, re-order date, minimum quantity, vendor, list price and other important facts.

From this information your personal computer, with the help of Inventory 64, will be able to collate and assess the major points of an efficient system and be able to present you with a complete and instantaneous view of current stock situations.

And ensure that stock control problems really are a thing of the past.

Pretty good value at just £29.95.

You'll find our superb range of Commodore 64 software for professional and business use in all good computer stores including selected branches of Boots, W. H. Smith, Menzies and Laskys.

If you'd like more information about our software or require any technical help fill in the coupon or phone us on 0475 462721.

# PROJECT

A basic circuit configuration for switching small DC loads is shown in Fig. 1. These loads can range from five to 25 volts with current consumption of several amps. Such a circuit can be used not only for controlling DC motors but also relays, solenoids, lamps and stepper motors and is therefore an invaluable basic circuit for the experiment. This circuit is, of course, not the only way of performing this function – solid state relays offer an excellent method with the benefits of optoisolation, ease of driving by a computer I/O port and both fairly high load switching and response frequency. They are however still fairly expensive.

The basic operation of the circuit is quite simple. When the output of the 7400 inverting gate rises, the emitter of transistor T1 rises to the same voltage as its base. Current then flows through the circuit limiting resistor R2 and T1 into the base of T2. While the base of T2 is held more than 0.8 volts above its emitter, the device will conduct. Current can then flow through the load. When the output of the 7400 drops to logic 0, then the emitter of T1 also falls to a low voltage level and T2 ceases to conduct.

The power transistor used in this circuit T1A 41A has the disadvantage of a low current gain. This means that if it is to pass a large current through its load then T1 must supply a smaller, but still high current to its base. The resistor R2 is placed in the circuit to prevent excessive current flowing through T1. If the TIP 41A is used then the load should not be more than one amp. For large loads the 2N 3055 can be used to replace the TIP 41A and the value of R2 can now be reduced to 10 ohms. Since this transistor has a higher current gain, current loads of several amps can now be switched.

It should be added that many devices with inductive loads, such as motors and relays, produce spikes of back emf. These could damage the circuit components, and therefore diode D1 is included to protect against this.

To control a small DC motor, two of these circuits were built on a single PC board and the inputs to the 7400 connected to two output lines of the computer. One of the circuits is used to energise the coil of a double pole changeover relay, the function of which is to reverse the motor's polarity and therefore its direction of rotation.

The method of connection is shown in figure 2 – this is the complete motor

Fig 1

Fig 2

Fig 3

control circuit. The second circuit controls the power supply to the motor, switching it on or off. The motor can now be directly controlled by the computer via the connections between the circuits and the I/O ports.

Since these currents only switch the motor on and off, the motor's speed is controlled by a technique known as pulse-width modulation. Here the motor is turned on for a period and then off. The ratio of on and off times determines the speed of rotation. If these time periods are very small then the mechanical inertia within the motor will cause the pulses to be smoothed out and the consequential integration gives a varying motor supply voltage and therefore speed. This is diagrammatically shown in figure 3. A program to control the speed of a DC motor is shown in figure 4.

## FIGARO 64

for

### commodore 64

Much more than a business graphics package or spreadsheet, FIGARO 64 is a powerful numeric database system for maintaining files of numbers and their descriptive data, plus hi-res graphics and slide show option. Easy-to-use menus provide built in statistics, calculating routines, and even seasonal forecasting, with full data security.

**Features include:**

Create New File, Open File, Close File, Disk Directory, New Series, Copy Data, Shift Data Left, Shift Data Right, Add, Subtract, Multiply, Divide, Cumulate, Display Data, Print Data, Enter Data, Amend Data, Mean, Harmonic Mean, Maximum, Minimum, Range, Moving Totals, Moving Averages, Standard Deviation, Correlation Coefficient, Growth Rates, Indices, Percentages, Seasonal Forecasting, Bar Charts, Line Charts, Dual Line Charts, Mixed Bar & Line Charts, Cluster Bar Charts, Pie Charts (all with Text and Hi-Res Graphics mixed on the screen), Screen Dump of Graphs or Save for Slide Show Option.

Ideal for Sales, Marketing, Finance, Education, Local Authorities, Biology, Meteorology and many other applications.

"Excellent little manual," "Very good for the cash trader" - *Commodore User, March 84.*

## FREE 14 DAY TRIAL OFFER

Send us a cheque for £25.00 as a deposit, and we will send you a demonstration cassette or disk, the user guide and specimen reports on 14 days trial.

If you then wish to buy the live system, return the demonstration cassette or disk (keep the user guide) and a cheque for the balance of £64.70 and we will send you the live cassette or disk and our VAT invoice.

Alternatively, if you return to us the cassette or disk, the specimen reports and the user guide in good clean condition, we shall return £20.00 to you retaining £5.00 to cover our handling charges.

Receipt by us of your cheque for the £25.00 deposit will signify your agreement with these conditions. Please state whether you require cassette or disk.

PRICE **£78.00** = VAT

## QUICKCOUNT LTD

15 NEED CRESCENT LONDON NW4 TEL: 01-202 5486

## VIC 20

**40/80 COLUMN DISPLAY MANAGER**  
ONLY **£99.99** INC P/P & VAT

Just pop this cartridge into your expansion port, and your display instantly goes to the industry-standard 24 lines, with a choice of 40 or 80 characters. Displayed this way, you'll know exactly what you're going to get on the printout. And you really increase the amount of data you can see on the screen!

**DISPLAY MANAGER WITH 8K RAM BUILT IN**  
ONLY **£125.95** INC P/P & VAT

### PARALLEL PRINTER INTERFACE for VIC-20 or C-64

So easy to use - simply plug-in and print. Includes all cables and connectors to a Centronics Type Parallel Printer. Includes all Commodore Graphics. No power supply needed. Works with all printers and all programs.

**£54.95** INC P/P & VAT

## COMMODORE 64

**VIDEO PAC 80**  
ONLY **£145.95** INC P/P & VAT

Move up to the industry standard 80-column format, and you'll wonder how you ever did without it! Use software control to go from 40 to 80 characters in monochrome - and back to 40 characters in colour. With VIDEO PAK 80, you can take full advantage of the terminal emulator mode and screen print feature with software we include. And this is a great package for word processing - particularly with our FREE WORD MANAGER software and spreadsheet.

**FREE**

### WORD MANAGER SOFTWARE AND SPREADSHEET

This software gives your VIC-20 or Commodore 64 capabilities found only in the most expensive word processing programs. Like full-function status display, and up-and-down scrolling, plus 13 advanced editing features including merging and block move. In addition, we've included complementary mailing list programs. All are written in machine language for fast execution and minimal memory requirements. They're self-documenting and exceptionally easy to use. A self-adhesive strip for function keys makes most commands one-key simple. So simple, in fact, that we've eliminated the need for time-consuming menus and prompts. WORD MANAGER is provided on tape for VIC-20 and C-64, also available on disk for C-64. It's yours free with VIDEO PAK or DISPLAY MANAGER.

The following number of cells are available with the following configuration:-  
VIC-20 8K EXPANSION RAM 50 CELLS  
16K EXPANSION RAM 300 CELLS  
24K EXPANSION RAM 500 CELLS

PLAN MANAGER performs all basic mathematical functions, plus automatically summing and calculating the formula for all cells. Cells can be moved, changed or deleted. Columns can be set to any width, individually or globally. The print option prints the full spreadsheet, restricted cells, or the spreadsheet model.

PLAN MANAGER was designed to be easy to use and very fast for users who require a spreadsheet for their home and business applications.

PLAN MANAGER is written entirely in machine language, handles up to 63 columns and 245 rows, calculates to 11 digits of precision, and can be formatted for integer, floating or fixed decimal points. Individual cells are unrestricted and many contain titles, numbers or formulas.

C64 WITH VIDEO PAK 80, 1,100 CELLS  
Note:- These numbers are approximate and will depend on what is actually stored in the spreadsheet.

NOTE:- 80 COLUMN FORMAT REQUIRES A MONOCHROME MONITOR

# Elementary Watson

**No-one could possibly expect to buy a Commodore computer and find out all they need to know about computing from the manuals provided. Unfortunately much of the other material that's available takes you no further than the manuals. There are exceptions, of course, and one of these is Dr Watson's Beginners Basic Course for the 64.**

This is one of the range of Dr Watson tutorial packages consisting of programs and written material. The Dr Watson series is rapidly becoming recognised as quality material.

This course consists of a program tape and a 300 plus page book. The whole package is excellently presented in a hardwearing plastic cover. The manual starts off with a guided tour of the keyboard and finishes with a brief introduction to machine code, covering almost everything else along the way.

Realising that most newcomers to computers play games, seven games are provided on tape. Although none of these would warrant a CCI star rating, they have each been carefully chosen, and written, to demonstrate various capabilities of the 64 and particular programming techniques. After the initial chapter, the listings for these games are used to show how programs are built up and new commands are introduced and explained both with written text, and small example programs. Interspersed throughout the book are exercises to ensure that you really are understanding each new command or technique, but at no stage do these become 'hard work', in fact the course consistently encourages you to learn more and more by making learning fun.

The two authors, P Holmes and D J Bush have obviously taken a great deal of time to produce a well thought out tutorial, and if this was the total content of the course, it would prove excellent value. However there is more . . . much more.

Side two of the cassette contains 'HONEYAID', a collection of no less than

28 additional basic commands in a 4K machine code program. Once loaded these commands sit 'above' basic, and allow many features of the '64' to be explored effortlessly. The commands are split into three broad sections, Toolkit commands, and supplementary Graphic and Sound commands. Among the 15 Toolkit commands are Append, Auto (line numbering), Delete, Old and (Re)Number, and these soon become invaluable when writing your own programs. The five Graphic and seven Sound commands make it almost possible to eliminate all those thousands of POKE commands that seem to make up the bulk of any 64 program. All commands are 'tokenised' and can be reduced to the first one or two letters

followed by the shifted next letter as per the standard Commodore commands. These 28 commands almost totally dispel the main criticism of the '64', its version 2 basic.

Side two also contains a clever 'Computer Aided Learning Program', "guess the number". After allowing you to play this simple game, the program then explains itself to you line by line and command by command, and graphically demonstrates some of the more familiar commands and concepts of programming such as the For . . . Next loop and comparative operators (< >). And still there is more. A Character editor, a Sprite editor and a marvellous sound manipulation program Composatune.

Composatune allows you to compose melodies note by note on a musical staff and save these for later use in your own program, it also incorporates a useful sound synthesizer subroutine which allows you to alter the sound of each note whilst hearing what you are doing and seeing which values are being poked into which locations. Unless you have a PHd in music, this is the easiest way to discover the effects of Attack, Delay and rest of those strange words referred to in the Commodore manual.

As with the games, these last three programmes are all explained line by line in the manual, and themselves form the latter part of the course.

If the remainder of The Dr. Watson computer learning series match the standard of this, then not only Commodore, but many other computer manufacturers have been shown how an introductory manual should be written.

# HARDBOX—Hard Disks for Commodore Micro-Computers

NOW AVAILABLE WITH  
SOFTWARE-CONTROLLED  
OVERNIGHT VIDEO  
BACK-UP

## HARD DISK INTERFACE

HARDBOX is the intelligent controller that lets you add a Corvus hard disk drive to your Commodore computer. In fact, you can chain up to 4 hard disk drives of 6, 11 or 20 Megabyte capacities.

Compatible with CBM DOS versions 1 and 2, the HARDBOX operates with existing Commodore programs and appears to the Commodore as a high speed, high capacity floppy drive.

## Multi-User System

Create a multi-user network by adding the Corvus Constellation multiplexer to your hard disk system. With a HARDBOX at each work station, up to 64 users can simultaneously access the same drive.

As a multi-user system, the HARDBOX provides:

- Separate user areas on each hard disk.
- Multi-user work areas for shared programs.
- File and record locking for shared databases.
- Password protection of user areas.
- Access to any user area from any station using the password.

## Video Cassette Backup

The HARDBOX supports the Corvus *Mirror Option*. This provides a high-speed, low cost means of backup, using a commercial video cassette recorder. Backup speeds of 7½ kilobytes per second let you save contents of a 10 MByte drive in less than 20 minutes. Video cassette capacity is approximately 100 Megabytes.

## Hardware Requirements

- Commodore 3000, 4000, or 8000 series computer with BASIC 2 or 4.
- One HARDBOX and PET-IEEE cable per work station.
- Corvus bare drive and ribbon cable.
- Access to a floppy disk or cassette.

Price .....£495.00

# Versatile plotter

This month we look at Micro Peripherals MCP-40, a four-colour printer/plotter

One of the most pleasing things about the MCP-40, besides its extremely versatile plotting abilities, quality print and four colours is that it was so easy to use. Unfortunately, to connect it to the 64 an interface is needed – either a Commodore serial to Centronics or a Commodore user port to Centronics.

The panel on the front of the plotter contains controls to select a colour, move the paper or change a pen. It also indicates if the power is on or if the paper has run out. The pens, which look rather like biros, are fitted into a holder and rotated by the plotter itself. Graphics and text are drawn on a roll of paper about 4.5 inches wide. The pen holder is a delicate mechanism, but the panel controls can be used to change any pen minimising unnecessary handling.

There are two modes of operation; the Text mode for word processing, writing text and programs and the Graphic Mode for generating graphs, pie charts and other pictures which need to be plotted. It should be noted here that it will not reproduce Commodore Graphic characters in listings, but it wouldn't be too difficult to write a driver program to actually draw the characters on the paper itself. There is also a self test mode in which four boxes are drawn, one in each colour so that the user can check that they are all working.

Micro Peripherals have programmed the plotter to understand certain commands and these are clearly explained in the manual together with an example showing how each one can be used in a program. To vary the print size in Text mode, the DIP switch can be set at either 80 or 40 characters per line. There is no problem switching to graphics mode and text mode in the program so if a diagram needs to be accompanied by an explanation this is quite straightforward. Anyone with some knowledge of BASIC and the CBM 64 would have no trouble in producing some very interesting and versatile pictures or diagrams using the commands available.

The plotter can print backwards, upwards, upside down and with the 63 different sizes of text, four colours and

seemingly endless Y co-ordinates, the users imagination and curiosity will be rewarded with spectacular displays. The paper is friction fed and can be made to move backwards as well as forwards providing extra versatility.

The Plotter always knows what colour pen it is using and will usually start with black unless programmed to do otherwise. The initials that are used to control the plotting functions are straightforward. For instance 'C' is used to change the pen colour and the Green is '2', so to change the pen to green in the program, 'C2' is typed in. 'D' stands for destination and specifies the end point that the pen must go to, 'Q' represents direction and the user can specify what direction the printing goes in. The paper

is 480 steps across and 999 steps downwards so it can plot and print very accurately.

There are some sample programs in the manual which demonstrate the plotting and printing capabilities of the printer. There is also a table listing all the characters the printer will print together with the ASCII and JIS code which will print them.

The MCP-40 is surprisingly small when its capabilities are considered and operates with very little noise. Small businesses may find it useful, but they would have to write their own programs. Any 64 enthusiast would probably find a use for this printer/plotter and its price, which is low for what it can do, puts it within reach of a lot of people.

**Product Name:**

MCP-40

**Product:**

4-colour printer/plotter

**Company:**

Micro Peripherals Ltd, 69 The Street, Basing, Basingstoke, Hants RG24 0BX

**Specifications:**

4 pens: red, green, black and blue

Paper roll 4.25 in wide x 180 ft long

Plotting speed: 2.05 ips horizontal  
3.80 ips vertical

Printing speed: 12cps

Resolution: 0.00787 inch

Plotting range: 3.804 inch X axis –

Divided into 480 steps, no limit in Y axis

80 or 40 characters per line

Pen life is 250m

8-bit parallel interface

3 Modes: Self Test, Text and Graphics

**Size:**

276mm wide x 174mm deep x 68mm high

**Applications:**

Plotting and printing in four different colours

**Documentation:**

Very detailed and clearly worded manual with sample plotting and printing programs

**Price:**

£129 + VAT

## Auto solutions

This month we have two machine code routines. One is for the 64 and is the next instalment in our Basic Aid routines, and the other is for VIC owners who wish to secure their programs.

### Basic Aid

The program following is for auto line-numbering on the 64. With this routine, line numbers once initialised, will be displayed without having to type them in. To enable the auto line-numbering, enter SYS50156, step where step is a value between 1 and 65535 (usually something like 10). Until the line

numbering is disabled, using SYS50156, any line entered will cause the next line number to be displayed on the next line. The next line number is the previous one with the step added.

All that is done is that if line numbering is enabled, the next line number is put into the keyboard buffer.

Therefore to exit the facility, just press SHIFT RETURN or delete to the beginning of the line. The other way to exit is to press return on a blank line. The latter method, however, will still delete that line.

Like all the other routines, the locations that this routine take up do not conflict with others in the Basic Aids.

## Auto-Run

Last month we published a routine that would save a Basic program on the 64 with auto-run. In response to that article, one of our readers asked if we could do anything for VIC owners. Well, here it is— an auto-run routine for the VIC.

When run, the routine will be put at the top of memory and it will be protected. 256 bytes are reserved but the routine will work on any expansion of VIC. The problem is that if it is saved with 8K or more expansion, it will only load

back in to computers with that expansion and vice-versa.

Also with the auto-run, the screen is cleared and RUN/STOP-RESTORE is disabled as outlined in last month's issue.

```

**commodore**  
**Superbase** SuperBase, the complete information storage and control system, is ideal for any business, office or professional environment where records are kept... The very latest design techniques make SuperBase the last word in database technology, with all the power you need to control today's information, for tomorrow's needs! That's why SuperBase is...

**The Ultimate CBM Database Manager**

Key SuperBase features include fast key access, large record size, user-definable inputs, outputs, record formats... multiple screens, multiple selection criteria... word processor links, sorting, calendar, calculator... program or menu control, on-line or batch processing, transaction linking... and it's available NOW for Commodore models 700, 8096 and 64!

**Superscript**

A Commodore enthusiast wanted a word processor that was simple, fast, and easy to use. He wanted to handle up to 20,000 characters of text, to use a wide screen format of up to 240 characters, with full window scrolling in all directions, and be able to use the screen while printing. He wanted a word processor at a reasonable price. The enthusiast, Simon Tramer, couldn't find one, so he wrote...

**The Ultimate CBM Word Processor**

SuperScript does everything he wanted... and much more. It provides a complete document preparation and storage system, making optimum use of memory and disk space. In short, it provides all the advantages of a dedicated professional word processor... And now SUPERScript II is available for Commodore models 700 and 8096, with a host of new features including arithmetic, selective sort, column move... and the 700 series version even includes a spelling-checker!

**FASTEST SERVICE - LOWEST PRICES!**

**Calco Software**

LAKESIDE HOUSE, KINGSTON HILL, SURREY KT2 7QT. TEL 01-546-7256

**INSTANT ROM (Commodore Approved)**

Greenwich Instruments' ROM/EPROM Emulators are non-volatile memory modules which plug into any ROM/EPROM socket. When the power is switched off, data is retained for up to 10 years. Emulators from 2 Kbytes to 32Kbytes are available.

In the PET, a 4Kbyte Emulator can be fitted in the 9000 or A000 socket, and used for fast program development. Basic or Machine-code programs can be stored permanently.

- GR2532 4Kbyte Emulator.....£56.00
- Adaptor GA1 (essential for PET users).....£ 6.00

**PETCLOCK (Commodore Approved)**

PETCLOCK plugs into any Commodore machine with User-Port, and gives time (hour/minute/second) and date (year/month/date/day of week). Battery backup—accuracy is maintained when the power is off.

- GCC1 PETCLOCK.....£62.00

**G-ROM E**

A 4 Kbyte EPROM which runs, at switch-on, any Basic or Machine-code program stored in INSTANT ROM, eliminating the need for tape or disc. Basic programs can be stored with a few key-strokes.

Some powerful utilities are included for program revival. PET's power-up memory test is made non-destructive, and UN-NEW us provided. A program for reading Date and time from PETCLOCK is also included.

- G-ROM E (specify type of PET).....£25.00

Postage (£1.00) and VAT are extra. Leaflets are available.

**GREENWICH INSTRUMENTS LIMITED**  
 THE CRESCENT, MAIN ROAD, SIDCUP, KENT DA14 6NW  
 Telephone: 302 4931 - Telex: 896691 Attn. GIL

**PET CONVERSIONS & UPGRADES**

It's here at a NEW low low price!! Don't throw out your old 9" PET. The MICROPORT 80 column conversion board for the 9" PET/CBM BASIC 4.0, or upgraded 2001/3000 series machines, will upgrade it to a true 8000 series. Simply plugs into the main logic board and with a small keyboard modification turns your PET into an 8032. Compatible with 8032 software and add-on ROM utilities. Supplied complete with full fitting instructions, or fitted free of charge if brought to our workshops.

- Full money back guarantee within 14 days if not delighted. £125.00
- Externally mounted switching unit for above (40/80 column switchable) £15.00
- 12" VDU (FAT40) 80 column conversion £82.00
- 40 to 80 column switchable (two machines in one!) £98.00
- Full keyboard functions:— i.e. TAB, ESC, REPEAT, SCROLL up/down, define WINDOW, lower case, graphics mode & DELETE from/to cursor. All available in direct or program mode. Any MICROPORT converted machine is also upgradable to 8096 specification with our 64K add-on board. £250.00

**CBM 64 QUALITY SOFTWARE**

If you own a PET system with disks or printer and have added a COMMODORE 64 then why not use your PET as an interface for the 64?

SIPOD is a serial IEEE to parallel IEEE software interface allowing you to use all the PETs disk drives, printers, plotters, modems etc. directly from the 64. No memory space is consumed within the 64 as SIPOD loads and executes within the PET. SIPOD is supplied complete with interface lead and instructions. £29.00

PRINTLINK 64. Interfaces a 64 directly to any printer with a Centronics input. The printer will respond to all the normal Basic commands for device #4. Supplied complete with instructions and interface cable. £26.00

We only sell one word processor for the 64. We think it is the best!

- VIZAWRITE 64. Text formatting word processor. Disk or cartridge £69.00
- VIZASPELL 64. Spelling checker with 30,000 word dictionary £59.00
- VIZAWRITE + VIZASPELL. Combined package. (Disk only) £99.00

- MIKRO ASSEMBLER. Write machine code with the ease of BASIC £50.00
- ARROW. Save & load to tape up to 7 times faster than normal £39.00
- VICTREE. All Toolkit & BASIC 4.0 commands plus a lot more £49.00
- ZOOM. An excellent machine code monitor for the 64 £10.00
- GRAPHIX 64. Easy to use Hi-Resolution graphics from BASIC £10.00
- STIX. A most addictive and compelling game (joystick required) £17.35

Official orders from schools, universities, major companies etc. are welcome. U.K. customers please add 15% VAT. Prepaid orders are POST FREE.

Telephone Mick Bignell for details of any of the above at:—

MICROPORT 7 Clydesdale Close, Borehamwood, Herts. WD6 2SD. Tel: 01-953 8385

# Music maestro

**In the December '83 edition of Commodore Computing, we published an article on how to connect a 4-octave piano keyboard to the 64. In that article, we also mentioned that there would be other programs to follow. This program replaces the previous one and allows full use of the SID chip's envelope facility.**

The principles behind the playing are as the first program except that instead of just reading the first three keys, all keys are read so that a note already playing will have precedence over other keys. The note is only played if it is not already

being played. If it is, it is left alone.

There is one other major difference, that is it has been written so that if you have a 5-octave keyboard, most of the other notes can be played.

To alter the envelopes, direct

POKEing to the SID chip is necessary but the wave form can be changed by just one poke to location 49742. The value sent to this location must be with the gate (bit 0) off ie the number must be even.

```

# for COMMODORE 64 the MST ADMINISTRATOR

A USER-DEFINABLE  
INVOICES & STATEMENTS  
FORMATTER &  
DOCUMENT GENERATOR  
● A COMPILED PROGRAM

ON TAPE & DISK

THE ADVANTAGES OF WORD PROCESSORS & SPREADSHEETS  
COMBINED IN THE NEW AND EXCITING PROGRAM FROM MST

- ★ Format & Print your own documents, or use those provided.
- ★ All VAT, discount, totalling calculations done automatically.
- ★ Use plain English — No programming needed.
- ★ Use plain paper or continuous pre-printed stationery.
- ★ Compiled program for high operating speed.
- ★ User-defined footer messages.
- ★ Double or single size characters.
- ★ Save documents and use when required — SALES & PROFORMA INVOICES, QUOTATIONS, DELIVERY & PACKING NOTES, ADVICE NOTES, STATEMENTS, REMITTANCE ADVICE NOTES, ETC.

for home computers

## PETX2

doubles the speed ...  
trebles the memory ...

... of your PET computer!

For users of the CBM/PET 3000, 4000 or 8000 series of computers who want to upgrade to new generation standards, computer specialists J.R. & S. Purdue have developed the PETX2 add-in board. Manufactured to the most exacting standards. PETX2 uses the latest microprocessor technology to double the processing speed of your CBM system, whether running BASIC, Silicon Office, Visicalc or any other application. The system comprises one board positioned inside the computer which can be fitted in 10 minutes using only a screwdriver. The board provides 96K of memory, thus upgrading 32K systems to 96K and replacing current 96K versions. This development means that your investment in software and data is protected, for by enhancing your machine speed, it comes into line with the Sirius, Osborne and even some 16-bit machines, as can be seen from the table of Personal Computer World Benchmarks:

Machine	BM1	BM2	BM3	BM4	BM5	BM6	BM7	BM8	Average
CBM with PETX2	0.87	5.1	9.4	10.3	11.2	16.5	26.0	6.0	17.5
IBM PC	1.5	5.2	12.1	12.6	13.6	23.5	37.4	3.5	17.6
Osborne 01	1.4	4.4	11.7	11.6	12.4	21.9	34.9	6.1	19.9
Apple 111	1.7	7.2	13.5	14.5	16.0	27.0	42.5	7.5	24.7
ACT Sirius 1	2.0	7.4	17.0	17.5	19.8	35.4	55.9	4.3	24.8
Apple 2	1.3	8.5	16.0	17.8	19.1	28.6	44.8	10.7	30.4

ULTRADYNAMIC!

COLOSSAL!!

Fantastic!!!

No. It's just not US....

When we started Simple Software Ltd in 1979, we didn't call it Hypergalactic Megasoftware. Our kind of customer wants value rather than inflated claims, reliability and ease of use rather than hype, helpful advice rather than a fancy pack off the supermarket shelf.

We sell to people who want to USE their computer. We sell games, too, we're not a glum bunch; but it's our DBMS, our Word Processor, our Assembler, etc, that earn us our surprising list of customers. Of course, we don't suppose the ICI use 'Simply File' for all their filing. Possibly the CEBG use something more than a PET to control the national grid. We even understand that the BBC have some other kind of computer. But they, like small businesses, club secretaries, students and teachers, are just as quick to see its merits as Ford, British Telecom and Hong Kong University. Confidentially, even Big Brother is keeping at least one eye on a Commodore with 'Simply File' in it.

**SIMPLY FILE DBMS (64, 40/80 PET).** "There is nothing better at any price for our use" (Customer above). £60 + VAT (PET £65 + VAT.)

**SIMPLY WRITE Word Processor (64, VIC-20, PET 40/80).** Good enough for business, cheap enough for home use. We write our manuals with it. Disk £40 + VAT, tape £35 + VAT (PET £5 + VAT extra).

**NEW!! SIMPLY ASSEMBLE** package for machine code (64, PET). It has never been easier, yet even our experts prefer it. Tape or Disk, £22 + VAT, 64 or PET.

From your dealer or from us. Write or phone for full details and free MicroMail newsletter.

## Keeping up-to-date

**Do you forget important dates? Help has arrived in the form of a desk diary and calendar program written by G P Raven, which we are publishing in two parts**

This program was written for the user who wants to put behind him the bad old days when he constantly forgot his wife's birthday and his wedding anniversary and when family birthdays and other important annual events regularly slipped his mind - I'm talking about me. It is a program which can be referenced daily to see what's on and to enter in appointments and other matters which must be remembered.

Each year the diary will carry forward all permanent entries such as birthdays, anniversaries, days when returns must be made etc but temporary entries referring to appointments etc which have already become obsolete can be deleted by using the REVISE facility.

Because of the limitations which 32k imposes on the number and size of sequential files that can be held in memory, the diary permits only 100 entries. This is, however, likely to be enough for most users since when the diary is full a prompt will ask you to REVISE and entries which are no longer required can be erased to make room for more. You can revise the diary at any time either for the whole year or for a period between two dates that may be entered in response to the prompts.

There is a facility to print (screen or hard copy) a calendar for any month of any year from 1900 to 2999. The current year is stored on disk and held in memory for reference by the diary. If the calendar for any other year is required then after reference to it is finished the program will automatically reload the calendar for the year of the diary.

The printer I use is a Commodore 4022. No allowance has been made in the program for any other type of printer. However, the experienced programmer will find no particular difficulty in altering the program (lines 157 to 175) to suit his own particular printer.

Since graphics are a problem on the 8000 series machines I have written a simple machine code routine to give the

screen headings a touch of class particularly for the individual pages of the diary. There is also another machine code routine for sorting. The routine I used was direct from Nick Hampshire's Library of PET Subroutines which I suitably amended for basic 4.0. Those who don't want to use a machine code sort can insert their own favourite basic routine at line 316 and replace sys32314 where it occurs at lines 78,229,245 and 317 with "gosub 316". The array to sort is zs\$(n-1).

The purpose of the sort is to keep all the entries in chronological order. The first three characters of the string that holds the diary entry are the day and month reduced to internal format at lines 295-299. The next four are the time according to the 24-hour clock. The sort therefore ensures that the entries appear in the array zs\$(n) in date and time order.

The machine code routines must be entered via the MLM and saved on the same disk as the main program. The graphics routine is hidden away in page 1 at \$0110 to \$0131 which is against all the rules but it doesn't seem to interfere with anything there. The sort routing is at top of RAM which is moved to accommodate it at line 8 of the program.

When the desk diary is used for the first time on RUN the screen will inform you that there are NO ENTRIES in the diary and ask for an input of the year for which you want to open the diary. The program then calculates the calendar for that year and saves it on disk as a sequential file called "Diary". This process takes about 35 seconds. Subsequently whenever the diary is referenced the file "Diary" is read into memory straight away and there will be no more long waits unless you wish to see or print a calendar other than the one for which the diary is open.

There is as usual a menu of options:

1. Make an entry
2. Look at an entry
3. Search

4. Print Calendar
5. Revise Entries
6. Start New Diary

To make an entry you simply select 1. and follow the prompts at the bottom of the screen. The date input and validation routine requires the DD/MM/YY format (although it will accept D/M/YY) and the time must be the 24-hour clock. If the entry doesn't have a time such as a birthday just press return. The EVENT should be consistent each time you enter a similar event otherwise when searching you will not find them all. For example if you write "Birthday" sometimes and "birthday" on other occasions, when searching for "Birthdays" the program will not find any that were entered as "birthday". The details of the event should be kept to 30 characters or you will be reminded of that fact. The last prompt is whether or not the entry is permanent or temporary. Permanent entries obviously are those which remain the same each year and temporary ones are appointments/engagements etc which can be deleted at a later stage.

To look at an entry select 2. and the prompt will ask you for the date you wish to look at. Again the date input requires DD/MM/YY. That page of the diary will then be displayed showing all the entries in chronological order. The return to menu option is accomplished by pressing the escape key (chr\$(27)). If you haven't got one, or prefer it, line 89 can be changed to read "if a\$<>"e" then 95. Similarly elsewhere in the program.

Option 3, allows you to search for all the items recorded in the diary for a similar EVENT such as all the Birthdays or Dinner Engagements etc. Simply enter the Event and all entries which were originally entered for the same event will be displayed in date order on the screen. If there is more than a pageful the program will stop until the option to "continue" is taken. If there is

# Scrolling routine

This month we take a look at smooth scrolling on the 64.

There is no problem in scrolling to the eight locations available in the VIC chip register 22 – the problem comes when all of the characters have to be moved over and the register reset. This could not be done in Basic because it is too slow.

Therefore, the routine that follows is done in interrupts, raster interrupts to be precise. This produces a very smooth, flicker-free scroll.

In some games, in particular Killer Watt by Alligata, this smooth scrolling is done to fantastic effect with the smooth scrolling going in both directions and also with three different speeds in both directions, also a zero speed.

The speeds are controlled by the joystick in port 2 and are used in respect

to a sprite moving against the flow of the scroll.

Another aspect to note about the routine is that the colour memory is not scrolled. This is due to the speed of the scrolling.

Sixteen lines are scrolled in all leaving the top five lines and the bottom four lines for stationary text, although it would be wise to leave the lines directly above and below the scrolling area blank.

The main difference between Killer Watts scrolling and this routine is that, in this routine, the display is scrolled onto the other side of the screen whereas in Killer Watt the display is brought in from an area of screen data.

The scrolling is initialised by SYS49152 and after that it will run independently of any other program.

**A DATAPLUS OFFER**  
 THE  
 SMITH-CORONA  
**TP-1** inc  
**ONLY £250** VAT  
 DELIVERY FREE

*'Dataplus have made their name supplying computer peripherals at competitive prices. I believe that we have now found the best price/performance daisy wheel alternative to dot matrix. The ideal printer for both data and word processing. Truly, a high quality machine at an affordable price. As Managing Director, I guarantee you won't buy better.'*

So make the most of your CBM64 and turn it into a quality printing system for home correspondence, documents, short stories and business use. The special interface kit required is available, see coupon.

Use standard stationery or, for ONLY £79 (if ordered with your TP1) we will supply a tractor feed so you can use continuous or fanfold paper.

This is just one offer you can't miss. To avoid disappointment RING NOW on our 24 hour answering service 0242 527412 to place your order quoting your Access/Barclaycard No., expiry date and full name and address OR complete the coupon below and POST TODAY.

Please allow 28 days delivery. If not completely satisfied return goods in original packing within 10 days of receipt and we will replace or refund your money in full.

For technical queries telephone our Expert Hotline 0242 37373 or visit our showroom at 39-49 Roman Road, Cheltenham.

**SPECIFICATIONS**

Print Speed: 120 wpm  
 Character set 128 ASCII 88 printable  
 Character spacing: 12 CPI  
 Printing: Unidirectional  
 Paper width: 13" max.  
 Writing line: 10.5" 126 character line  
 Line spacing: 6 lines per inch  
 Paper Feed: Friction, single sheet or fanfold.  
 240 volts, 50Hz  
 Dimensions: (H) 6.4" (W) 19.5" (D) 12.4"  
 Weight: 18.5 lbs

Operator Controls: Power on/off, top of form, impression controls (5 levels)

**INTERFACES**

**Parallel**

Centronics compatible, 7 bit parallel data, 3 control lines (data, strobe, busy, acknowledge)

**Serial**

RS232C compatible, 50-19200 BPS, parity and character bit length all switch selectable.

# HEALTHCARE FOR YOUR HARDWARE

When your Commodore 64 seems distinctly unwell it's hard to know what to do.

Which is why you need 64 Doctor.

This special program will find the fault by a series of short diagnostic tests. And tell you exactly where the problem lies.

Included are tests for RAM, keyboard, disc-

drive, joysticks, datacassette, printer, audio and video displays.

So as well as saving you pounds in having someone check through the whole system for a fault, 64 Doctor will give you peace of mind.

You can give your system a check-up by visiting any good computer store including selected branches of Laskys, W.H. Smith and Boots.

64 Doctor. Tape £17.95 inc. VAT. Disc £19.95 inc. VAT

 PRACTICORP

Practicorp, Goddard Road, Whitehouse Industrial Estate, Ipswich IP1 5NP. Tel: 0475 462721

## EPROM PROGRAMMER MK3

This advanced version of our Mk.2 Programmer will program the popular industry standard 2516, 2716, 2532, 2732, 2564, 2764, and 27128 EPROMS. Disk-based software with all the essential functions for fast and reliable EPROM programming. 14 functions including Check-Empty, Program, Verify, etc; plus 6502 Disk Assembler and Assembler Hex-File loading (CBM or JCL Assemblers). With built in power supply and new custom case, this is the Programmer Commodore use at Slough! Price £299+VAT including 2716 personality card.

## IEEE BUS-ADAPTOR FOR VIC 20 AND CBM 64

A superior adaptor at a reasonable price. This brand-new item allows you to use standard CBM/PET IEEE disk drives and printers with your VIC or 64. Many advanced features including:

- ★ MINI-DOS support
- ★ Batch file loading
- ★ Gold-plated edge connector for long term reliability
- ★ Selectable default device number for load/save
- ★ Multi-user bus sharing and simultaneous use of the serial bus.

Supplied with instructions detailing these features plus many more. Price £59+VAT.

**JCL SOFTWARE**  
47 London Road, Southborough,  
Tunbridge Wells, Kent

## JCL 700 WORKSHOP

Superb NEW cartridge for the CBM 700. Your programs will become faster, more reliable, smaller and much easier to write!

- ★ 10 TOOLKIT-type programming aids.
- ★ Bi-directional screen scrolling.
- ★ Enhanced BASIC with 39 new KEYWORDS.
- ★ Comprehensive data input systems with efficient File Interfacing.
- ★ DOS-SUPPORT available all the time.
- ★ ASCII-editor for text and assembler files.
- ★ Elementary word processing facilities.
- ★ BANK-SYS, Kernal in every bank.
- ★ Design and add your own BASIC extensions.
- ★ Extra RAM in system bank.
- ★ Comprehensive manual.

Available now, price £120.00 + VAT.

## BUSINESS ROM

The BUSINESS ROM for 4000/8000 Commodore Machines adds 25 additional keywords to BASIC. Super screen management & input systems coupled with efficient easy-to-use relative file handling... and more. Includes DOS-support. Used by many major UK companies who require the best! Price £80.00 + VAT.

## ROM PAGER

ROM PAGER boards for 3000/4000/8000 machines give 8 extra expansion sockets for ROMs or EPROMS, easy to fit, leaves user port free. Price £45.00 + VAT.

Phone 0892-27454  
for data-sheets or  
contact your nearest  
Commodore dealer.

# VIZASTAR 64

## THE INFORMATION PROCESSOR

■ Spreadsheet

■ Database

■ Graphics

■ Extract from your information files and include them into the worksheet for fast, powerful calculations and easy reporting.  
■ Instant, on-screen design of your information records.

■ One word menu lines for easy selection of facilities.  
■ The high resolution grid pattern frames the worksheet giving an easy-to-read display.

■ A 1000 Row by 64 Column wide worksheet with large memory capacity and efficient usage.  
■ Extensive use of 'Windows' allows you to view one part of the worksheet while working on another.

■ Add or remove items from your records without having to re-construct your existing information records.  
■ Records up to 1,000 characters long with each item up to 250 characters.

■ Advanced spreadsheet features include individually variable column widths, protected cells, a programming facility plus a wide range of maths functions.

■ Supports virtually any printer - CBM, EPSON, JUKI, BROTHER, OLIVETTI and many others.  
■ Parallel printers require ONLY a low-cost cable.

■ Include information directly into the Worksheet from VizaWrite and almost any other system.  
■ Simultaneous display of worksheet and line or bar graphs.

■ Worksheet manipulation lets you Search, Sort, Copy, Move, Delete and Insert by row, column or a range.  
■ Text editing facilities for letters, invoices, report headings etc.

VizaStar integrates three important electronic aids to your business or home office.

A fast and easy-to-use package - VizaStar is a comprehensive information processor that includes an electronic worksheet, information filing system and simultaneous on-screen graphics.

VizaStar has been designed to incorporate the very latest in user-friendliness - so now you can handle your all-important information in many new ways and in a quick and effective manner.

The information filing capabilities of VizaStar enable you to store your information onto disk in

an ordered and instantly retrievable form. This means that you can quickly pick out individual or entire groups of related information to create lists, statements, labels or reports.

VizaStar is the ONLY program of its kind on the Commodore 64. Completely consistent with the VizaWrite word processor, VizaStar provides a totally comprehensive office system.

VizaStar costs just £99.95 (incl. VAT) from your computer dealer and selected stores. Please write for more details and the name and address of your nearest dealer.

## Low price high quality software for Commodore 32K Pet & 64

Integrated accounting systems, Purchase ledger, Sales ledger, Invoice printing, Statements, Trade and early settlement discounts, Payroll with SSP and seven overtime/piece work rates, Stock control, Cash Book, Nominal ledger, will complete audit trail etc etc.

### Purchase & Sales Control £80.00 + VAT

Runs both purchase and sales ledgers with optional circulation of VAT from the gross or nett amount, analysis by accounting period, "Due for payment report," totals for NETT VAT and gross. Print invoices on your own stationery laid out according to your own instructions. Suitable for small businesses only. Any 32K Pet or 64.

### Stock Control £60.00 + VAT Nominal Ledger £60.00 + VAT

Produces trial balance and up to twenty reports in addition to Profit and Loss and Balance sheet. This programme can be used on its own and it can read files set up by our Purchase and Sales control.

Write or phone for further details

## COMMODORE 64 ASSEMBLER/DISASSEMBLER

Fast and powerful assembler. Lets you program in 6510/6502 mnemonics with LABELS and VARIABLES. Six pseudo ops

.ASCII .BASE .BIT  
.BYTE .END .WORD

Six control commands .SAVE .LOAD .DISPLAY  
(executed by function keys) .STOP .ERASE .CONVERT

Disassembler will disassemble any part of memory

**TAPE plus MANUAL £9.99**

### VIC 20 ASSEMBLER

LABELS, VARIABLES, pseudo ops, control commands (min 16k) **TAPE and MANUAL £9.99**

### DATABASE 64

Menu driven Database system for CMB 64. Max 30000 records, 255 bytes/records, 15 fields/record. CREATE database. ADD, INSERT, DELETE, AMEND records. SEARCH for record on any field, including wild card matching (?,\*). SCROLL through database. LOAD/SAVE database to tape or disk. On line help screens.

**DATABASE TAPE and MANUAL £7.99**

64 GAMES. 3D noughts and crosses, othello, hangman, big letters, sprite editor

**£3.99**

Overseas add £4.00

**DYNAMITE SOFTWARE**  
BCM 8713, LONDON, WCIN 3XX

from small systems . . . . .

## IBM 80 CARD

Expand the capability of your IBM PC with our CP/M 80 second processor card.

- True CP/M 80 not an emulation.
- Built in Corvus hard disk interface with multi user capability.
- Drive "M" utility makes RAM behave like a super fast disk drive.
- Files generated under CP/M 80 and 86 are identical in structure and are interchangeable between operating systems.
- File transfer utility between PC DOS and CP/M 6 MHz version .....£265

## PET CP/M .....£495

The **SOFTBOX** allows the PET to run under the world's most popular operating system CP/M 80.

- Built in RS232 and CORVUS hard disk interfaces.
- Operates with any 2000, 3000, 4000, 8000 system.
- Z80 cpu running at 4 MHz with no wait states.
- 64K RAM, full documentation, free copy of CP/M 80.
- Will run any standard CP/M 80 software.

## IEEE-488 INTERFACES

### B300

Bidirectional IEEE-488-RS232 interface 40 char input buffer, full handshake, etc etc .....£186

### C100

Unidirectional IEEE-488 to RS232 .....£120

### A100

IEEE-488 to Centronics/Anadex Parallel .....£106

### GPI 1000

Z80 based bidirectional IEEE-488 to RS232 with a choice of input buffering up to 59K .....£475

### TV/VIDEO interface

Reproduces the content of the PET screen on a TV or video monitor .....£46

**RS232** to 20 mA current loop adaptor .....£25

## PET HARD DISKS .....£495

The **HARDBOX** is the intelligent controller that lets you add a CORVUS hard disk drive to your Commodore computer.

- PET DOS 1 and 2 compatibility.
- Multi-user capability with file and record locking, passwords.
- 16 Mb max file size and up to 65535 records per relative file.
- 2000 files on 6 Mb drive.
- Access to 6, 10, 20 Mb drives with video tape backup.

## SIRIUS/VICTOR 9000 CARD

This card now being manufactured under licence by Sirius Systems Technology allows the Sirius/Victor to run any standard CP/M 80 program without modification.

- Specification as per the IBM 80 CARD
- 6 MHz version .....£199

## DEVELOPMENT TOOLS

8048 family in-circuit emulator .....£1100  
8748 Programming card .....£130  
Cross Assemblers for most popular microprocessors .....£145  
P+T 488 S100 to IEEE-488 controller card .....£355

Small Systems also carry a comprehensive range of microcomputer software. For detailed information on this or any of the above products ring 01-328 7145.

**DEALER ENQUIRIES WELCOME**

**small systems engineering limited**

2-4 Canfield Place, London, NW6 3BT Tel: 328 7145 Telex: 264538

## Printer

Hewlett-Packard's model 2934A is a newsletter quality printer. It costs £2,327 and, with the IEEE 488 interface option, it is compatible with the Commodore 8000 series.

Capable of three printing speeds; 40, 60 and 200 cps, it can produce dot addressable graphics. Nine type styles are available with plug-in cartridges and print enhancements include justification, centring and proportional spacing. The normal line length is 136 characters, but this can vary from 68 to 223. Underlining and three character pitches can be used for emphasis. Data receive rates are selectable up to 19,200 baud.

**Contact:** Rapid Recall Ltd, Rapid House, Denmark Street, High Wycombe. Tel: 0494 26271.

## Adcomp

Adcomp (UK), a subsidiary of Adcomp GmbH of Munich, are now responsible for the distribution of Adcomp products in the UK.

Hard disk systems for Commodore computers and a colour printer/plotter are their main products. The AP18 hard disk was originally distributed by IMI Computing Ltd.

**Contact:** Adcomp (UK) Ltd, 56 Long Street, Dursley, Glos. Tel: 0453 46496.

## Expand

To complement their 160K expansion board for the 8000 series, SM Software will be introducing and negotiating new 160K software. SM-Text 160 with up to 1100 lines free for text plus some other famous name programs will be available in the near future.

**Contact:** SM Software, Raglan House, 56 Long Street, Dursley, Glos. Tel: 0453 46065.

## Test ESD sensitivity

Anyone anxious to test ESD sensitivity in their semi conductors will be interested in the Autozap 200. It is software controlled and runs on the 8032.

The latest model range is the series 326 which can be used as complete DC supplies for medium precision applications or as pre-regulators in high precision DC supplies for transmitters, high power lasers

and X-ray systems for example. Safety features such as an external interlock circuit for customers, door and panel interlocks and AC supply interlocks are incorporated. They cost about £13,500 each.

**Contact:** Hartley Measurements Ltd, Unit 4, Bear Court, Daneshill East, Basingstoke, Hants RG24 0QT. Tel: 0256 56695.

## Database

Saxon Computing have released Figaro 64, a numeric database system for the 64, on disk and priced at £86.25.

Data can be maintained and displayed in a wide variety of graphic styles including bar charts, line charts and pie charts. Text and hi-res graphics can be mixed on the screen. Features include built in statistics, calculating routines, seasonal forecasting and data security is provided by back up routines.

Saxon claim that it will be suitable for sales and marketing applications as well as more specialised fields such as biology and meteorology.

**Contact:** Saxon Computing, 41 Brighton Road, Godalming, Surrey GU7 1NT. Tel: 04868 4599.

## On offer

Impex Designs are offering Word Manager, Plan Manager and a mail merge program for the 64 and VIC 20, free with the Video Pak 80 – an 80 column upgrade costing £145.95.

Word Manager is a word processing package and Plan Manager, a spreadsheet program can handle up to 63 columns, 245 rows and calculates to 11 digits of precision. It will perform all the basic mathematical functions and with the print option the full spreadsheet, restricted cells or just the spreadsheet model can be printed. Full use is made of the Commodore function keys in both programs.

**Contact:** Impex Software, Metro House, Second Way, Wembley, Middx. HA9 0TY. Tel: 01 900 0999.

## Solve it

Davidson Richards have set up a service called the Communications Solution. Anyone with problems instituting a viable communications system using their equipment can get advice on what products and interfaces will be needed.

Each client is treated individually and will be advised on a package to suit them. A typical pack includes modems, software, interfaces cables. The Commodore computers can be connected to mainframes as well as mini computers.

**Contact:** Davidson Richards Ltd, Systems House, 29 Charnwood House, Derby DE1 2GU. Tel: 0332 383231.

## Mr Chip range

Mr Chip have now moved into the business software market with the launch of an accountancy package aimed at small to medium-sized businesses. Designed for use with the 64, the seven programs making up the package can be purchased individually or as a package. Available on cassette or disk, the programs cost £25 each. For those interested in purchasing the complete package, Mr Chip are offering a saving of £35 bringing the price of the package down to £115.

The programs making up Mr Chip's accountancy package are the Accounts Package, Purchase Ledger, Sales Ledger, Sales Journal, Purchase Analysis, Sales Analysis, and Final Accounts.

**Contact:** Mr Chip Software, 9 Caroline Road, Llandudno, Gwynedd, North Wales. Tel: 0492 79026.

# 64 Work-horses

**If you're a businessman who's picked up a copy of this magazine to find some guidance about which computer to buy then read this.**

Perhaps you've been pondering the advantages of having a computer which would enable you to find out quickly what would happen to your sales if you put up prices by 10 per cent. Perhaps you've been worried about the possible effects of an increase in your labour costs.

You will undoubtedly have had advice about buying computer systems that cost between £1,000 and £5,000. Pause for a while and consider the possibilities of the Commodore 64. OK cynics, you can stop sniggering now. You obviously haven't seen Microsoft's Multiplan.

It's the sort of product that pays an incredible compliment to the 64. As is obvious from the references and the illustrations in the manual, Multiplan was previously written for the Apple and it's a surprisingly big, serious business program.

The point is, of course, that to a huge degree—and especially in business—the computer is only as good as its software. Microsoft and others who have provided good quality business software for the machine have been gradually upgrading the 64 so that it becomes a genuinely inexpensive but viable alternative to bigger machines costing much more. There may be those who believe that Commodore don't really deserve it. But they did produce the 64 in the first place!

It seems to be a huge program, marvellously flexible. This is undoubtedly due to the program's use of the disk drive which seems to be constantly accessed. In spite of the notorious slow speed of the 1541 the program did not seem to be slowed down at all. It's difficult to see how, in most of the tasks, anyone could wish for anything quicker.

It's been made as simple as possible but anything this big is certain to take a while to get used to and I would imagine that one would need to be using it for months to become entirely familiar with it and explore it fully.

£89.91 buys you what is probably the best spreadsheet software for the 64 on the market — you would certainly have problems finding anything similar at a similar price. Presumably if you've read this far you will know what a spreadsheet is but for new business people a spreadsheet is simply a sheet of paper with rows and columns. Accountants will know the format well. They're forever working out figures on huge sheets of squared paper which are the equivalent of Multiplan's worksheet. Where any electronic worksheet wins out over the manual method is that the electronic worksheet has an enormously powerful calculator built in — change one number on the sheet and all the other figures which may be affected will change before your very eyes! Change the figure in the costs column, for instance, and you'll see how your profits will be affected. Such a tool has obvious uses in forecasting and planning.

Multiplan is described as a worksheet but spreadsheet might be a more familiar word for many business users. Imagine a huge sheet of paper 255 rows deep and 64 columns wide. That's the total extent of one Multiplan worksheet. But the screen of your 64 only acts as a window on to part of that at a time — a part that's four columns wide and 18 rows deep. On the original Apple version the window is seven columns wide and 20 rows deep.

Why is Multiplan different from other spreadsheets? It has tremendous flexibility. You can, for instance, connect and disconnect worksheets. You can even view parts of different worksheets on the same screen.

The size of the 64's memory is obviously one of the main reasons why Microsoft felt able to adapt Multiplan for the 64. But Multiplan may still surprise you with its size. It's fine having a marvellously sophisticated program but what if it takes up too much of the computer's memory? Such a business

program would leave you no room for work. One of the ways that Microsoft get over this is by accessing the disk — a request for Help, for instance, sets the drive whirring busily. In fact, Multiplan takes up 437 blocks on the disk (leaving 227 free for your own files).

The big test of any software is, of course: Does it work? The first time I used it something went very wrong. A row of !!!!!!! appeared instead of numbers after I had attempted to give values to all numbers. But I'm quite prepared to admit that it was all my fault since Multiplan worked without a hitch on all other occasions.

Multiplan may seem daunting at first but is very user friendly once you know your way round it. An enormous amount of work has been put into making it as simple as possible. It's not quite idiot proof but one of its great advantages is that you don't necessarily have to be familiar with computers to use it. The documentation is a tremendous help — it is some of the best that we've seen. There are 187 pages of tutorial and 238 pages of reference. It explains clearly and simply what is happening and what you need to do to make something else happen. The 'HELP' file of Multiplan is available all the time and will give you the appropriate advice for the part of the program in which you're stuck so there's no need to go through a whole file before finding the right place.

One of the most impressive aspects of Multiplan is the obvious effort that Microsoft have made to produce something of quality.

Even the perspex case it comes in can be converted into an 'EaselBox' — with the top folded down it's a bookstand to support the manual or the top can be removed to form a separate bookstand while the box can be used for storage. The EaselBox idea shows what thought has been put into the product.

**NEW** SPECIAL OFFER for CBM64

**80-COLUMN/GRAPHIC CARD**

- Digital clock
- Mixpossibility of 80-column screen with Hires CBM64-screen (also in colour)
- Graphic pictures; can be switched to background
- Upper line can be locked (for comments etc.)
- Adjustable line spacing for greater clarity on text screens

# Cheap but not nasty

This month we look at Keyaki's daisy wheel printer and find that despite its low cost it retains all necessary features

The Daisy Step 2000 claims to be a fully-featured low cost daisy wheel printer and we could find nothing to contradict that. The only drawback with this version is that an interface will be needed and the additional cost will have to be considered if you are thinking about budgets. It produces very good quality print outs and although it isn't one of the faster daisy wheel printers on the market, 18 cps isn't slow. It is also quiet which is an advantage in a work

environment.

The push buttons on the panel at the front of the printer are touch sensitive and the four indicators turn red to indicate if the power is on, if there is an error, if the printer is ready to accept information and also when the test routine is being run. The other three controls clear the line counter, set the top of the form (TOF), feed the next piece of paper to the TOF and advance the paper line by line. The controls needed to

select the distance between each line, the length of page, the character size and the strength or print are located in the DIP switch at the back of the printer.

With this printer many of the controls will only work if you are using software that recognises them. For instance the printer can cope with the following features but needs to be programmed: subscripts and superscripts; horizontal and vertical tabs and proportional spacing.

The printer is accompanied by manual, print wheel, ribbon cartridge and a power cable. It proved exceptionally easy to fit the daisy wheel and ribbon cartridge – a bonus if you are used to complicated ribbon loading mechanisms. It can print up to four copies and there is an optical tractor feed mechanism or single sheet feeder available for the printer.

The Daisy Step 2000 is worth considering if you or your business needs good quality print for letters and other word processing applications. It is also comparatively easy to use.

**N.B.** IBEK Systems are producing a 64 version of this printer and it is due for release at the end of April for about £319. There are a few features especially developed for the 64, for example Commodore normal programmable listing codes will be translated by the printer as readable English codes ([CR] for cursor right)

**Contact:** IBEK Systems, 437 Stoney Stanton Road, Coventry, West Midlands CV6 5EA. Tel: 0203 661162.

**Product:**

Daisy wheel printer

**Supplier:**

Keyaki Ltd, Enterprise House, 42-44 Terrace Road, Walton-on-Thames KT12 2SD Tel: 0932 242777

**Specifications:**

Speed: 16 cps

Uses Oume ribbons and daisy wheels

Bidirectional logic seeking printing

12, 14 and 18 cpi

120, 144 and 180 cpl

13 inch maximum paper width

Software controlled proportional spacing

4 levels of impression control

Copy capacity: original and 4 copies

Friction platen paper feed

**Interface options:**

8-bit parallel Centronics

RS 232 C

12-bit parallel

**Applications:**

Word processing

**Documentation:**

Detailed manual written in English, German, French and Spanish

**Price:**

£289 = VAT

# Buffer them up

**In this month's product survey we look at a selection of printer buffers which enable you to continue using your computer while printing out**

Anyone with a printer will understand the frustration of standing around staring at the screen while the printer is busy producing hard copy. The computer is effectively redundant while the printer is in use – not such a problem for the home user perhaps, but a real headache for many businesses.

This is where the printer buffer comes in. All the data waiting to be printed is stored in the buffer's RAM in seconds, freeing the computer and other equipment for other tasks. The buffer then feeds the data to the printer so it can print at its own pace.

In the old days people who wanted a fast printer chose dot matrix, but in doing so often sacrificed the letter quality of the slower daisy wheel. The Commodore 1361 dot matrix operates at 150 cps (characters per second) whereas the daisy wheel Commodore 6400 runs at 40 cps. With a printer buffer installed between the printer and any of the Commodore computers, the printer's speed is largely irrelevant.

Printer Buffers are available in two forms: standalone and on a printed circuit board which slots into the back of the printer. Most of the board buffers are designed for the Epson printers. Not all printers are directly compatible with Commodore and a lot of them have Parallel Centronics or RS232C interfaces, so if you are thinking of investing, check that the printer buffer has the appropriate specifications. For instance if you have a Pet and a parallel printer you will need an IEEE to Parallel buffer.

Some printers have a buffer of up to 16K built in, but there are some disadvantages with these. Pressing the button on the printer has no effect until the buffer is empty, so if the paper jams, the information still has to be printed out and the text re-run to get a perfect copy. Printer interfaces often have a buffer function attached to them, whereas the printer buffer has a small interfacing capability.

The size of the buffer's memory

varies – the larger the memory the more text can be stored before being printed out. A 2K buffer will only store 2,000 characters (400 words if you take the average word length to be five characters long) whereas a 32K buffer can hold up to 32,000 characters (6,400 words). Buffer's can usually be expanded by attaching additional memory.

In most business situations, time is money and it is advantageous to get things done quickly. However, anyone with a printer will prefer to get on with the job right away rather than hang around wasting time. Printing out 32,000 characters on a 160 cps printer would normally take about 17 minutes, but with a 32K buffer, the computer is free in 64 seconds!

Some of the buffers have a secondary addressing function and this enables the printer to deal with programs requiring more than 256 different characters on the print out. Most of the

ready made business software will not need to use it, but Commodore's own software, educational and scientific software and also programs that people have written themselves will benefit from this facility.

Some of the buffers in the survey will need interfaces as they are not compatible with Commodore machines without one.

# NO WAITING

## Keep your micro motoring with a printer buffer

When you've invested some serious money in a micro system, why keep your system waiting while you print out your hard copy?

If you think about it, you must spend 1-2 hours every working day just waiting around – unless you invest in a printer buffer from Interface Systems.

Whatever micro you're using, our compact buffers simply plug into your system. So you can dump pages of text straight into the buffer, leaving your system free to carry on working for you – within seconds.

Every Interface System printer buffer comes with a full 90 day warranty. Yet they're still better value, bit for bit, than any other comparable buffer on the market.

We've made it simpler to get your hands on our buffer too – and our dealer network is still growing. Simply phone us direct for your nearest supplier, and start saving system time (and money) today.

Suitable for: Commodore · IBM · Digital Equipment Corp · Apple · Epson · Ricoh  
Diablo · Anadex · ACT Sirius · TeleVideo · Torch · Superbrain · N.E.C. · Sharp

# Isn't it time you stopped running your computer at printer speed?

*In ten seconds, your computer can output enough print data to keep your printer busy for five minutes, or longer.*

*With some applications, this simple fact can mean that the computer spends 90% of its working day waiting for the printer, instead of computing. But the solution is cheap, effective, and painless — and it's here today.*

## Concurrent printing saves time and money.

**Plug a print buffer into your micro system, and profit from the one really useful feature of concurrent processing: computing while you print.**

*Next time you are locked out of your computer by invoice printing, graphics dumping, or whatever, remember that installing one of our buffers will get your computer back to computing, fast.*

*The new E/Buffer, with IEEE-488 input option, allows you to drive your Epson MX or FX printer direct from your CBM Pet with up to 64k of buffering. From £120.75 incl. VAT (16k model).*

*Available May; Printer interface for the Commodore 64 serial-IEEE port. 2k buffer, or unbuffered. Boxed or printer-mounted. From around £65.*

*We supply a comprehensive range of print buffers, data buffers, protocol converters, T-switches, etc. Buffer sizes from 2k to 1 megabyte. Ask for our latest product list, or get your local dealer to call us direct for full details and prices.*

# DIAL-TEXT 50

**TYPEWRITER TO TYPEWRITER COMMUNICATION**

This is only one of several Duplex interfacing products. Of particular interest to PET owners is our IEEE to RS232 interface.

ET phone... ET

DIAL TEXT 50 is a simple to use electronic typewriter (ET) to electronic typewriter communications device. It is fully compatible with the OCTET 121 and HERMIT 21 encoders designed by Duplex and can also be used with any RS232 device such as a microcomputer or printer.

### Simple to install

Installation is easy and no special wiring is required. Communications are achieved by simple cable connections to the built-in acoustic coupler. For operation, the user can simply place the DIAL TEXT 50 unit and acoustic coupler between any OCTET 121 or HERMIT 21 typewriter and a standard telephone handset for transmission of ERB or FREE letters and documents (or voice messages) to a remote DIAL TEXT 50 unit and acoustic coupler, nationally or internationally.

### Typical application

The DIAL TEXT 50 unit is ideal for remote offices which would like to use the main office telex facilities. Text can be prepared at the remote office and transmitted to the main office by "T" line for forward transmission. Incoming telex is for the remote office could receive messages in the reverse manner.

### Special Dial-Text 50 features & benefits

1. 16,000 CHARACTER MEMORY. Retains contents when power is off.

- 2. ERROR FREE MESSAGES through built-in automatic ERB or ELECTRIC and CIPHERTEXT facility
- 3. TRANSMISSION SPEED approx 5 times faster than a standard telex machine providing the FULL range of typewriter characters and symbols appear clear and broken cable
- 4. MENU DRIVEN through a 16 character display
- 5. OPERATORS CONTROL PANEL for messages viewing and deletion
- 6. INCOMING OUTGOING messages automatically differentiated by special characters
- 7. ABILITY TO PRINT (receive) messages from the DIAL TEXT 50 unit at any time
- 8. ABILITY TO STORE messages onto a standard tape cassette unit (Ask for the OCTET or HERMIT 21 unit)
- 9. CONVENIENT CONFIDENTIAL MESSAGE HANDLING so your secretary can operate
- 10. PORTABLE lightweight stand alone unit with own 240v power supply which can be shared within the office
- 11. DIAL TEXT 50 allows local text processing without the need to transmit messages
- 12. COST of transmission limited to normal telephone rates
- 13. MESSAGE CHAMBER facility (optional)

SUSS

BOX

The DUPLEX SUSS BOX and DUPLEX SUSS ADAPTOR have been designed to enable the less skilled computer user to have a better understanding of the correct working connection between a computer and a peripheral, such as a printer. This is achieved by using the currently used signals (wires) of the RS232C serial data interface specification, a matrix block and special connector pins. By inserting the connector pins into the SUSS BOX matrix block at the end of two incoming signals the user can quickly establish a firm connection. The signals are routed into the SUSS Box by two 25 way D type connectors, 1 x female, 1 x male. The SUSS BOX also provides a lamp for each signal to show its condition when connected in line, ie High or Low.

### SUSS ADAPTOR

When you have achieved the correct Pin out between a micro computer and a printer the DUPLEX SUSS ADAPTOR should be used as a permanent part of connection. This is done by inserting the correct matrix block pins into the SUSS BOX with the matrix block of the SUSS ADAPTOR and then connecting the SUSS ADAPTOR to the computer and printer.

### SUSS BOOK (2nd edition)

For full instructions on how to connect a microcomputer to the OCTET or HERMIT 21 typewriter printer then refer to DUPLEX'S SUSS BOOK. For details on various microcomputer cable Pin outs.

# Superbase 64

TRANSFORMS THE COMMODORE 64 INTO A FULL-FEATURED AND PROFESSIONAL DATABASE SYSTEM! WITH UP TO 1000 CHARACTERS PER RECORD ON UP TO 4 SCREENS... AND UP TO 128 ITEMS PER RECORD, DEFINABLE AS KEY, TEXT, NUMERIC, CONSTANT, RESULT OR DATE... IN FILES OF UP TO 164 CHARACTERS! SUPERBASE 64 EVEN HAS SPREADSHEET AND CALCULATOR CAPABILITY, CALENDAR FUNCTIONS, EASY INPUT FROM WORDPROCESSOR/DATA FILES, BOTH MENU-DRIVEN AND PROGRAM OPTIONS, SORTING/SEARCHING, FULLY DEFINABLE OUTPUTS... SUPERBASE 64 IS ESSENTIAL IF YOU WANT THE MOST FROM YOUR 64! SUPPLIED ON CBM 1541 DISK WITH EXCELLENT TUTORIAL/REFERENCE MANUAL. **OUR PRICE £99.95 £88.00!**

## VIZAWRITE 64

VIZAWRITE 64 IS A HIGH-PERFORMANCE, LOW-COST WORD PROCESSOR, WITH ON-SCREEN FORMATTING, THAT TAKES FULL ADVANTAGE OF THE 64'S COLOUR, GRAPHICS AND MEMORY FEATURES... AND SUPPORTS VIRTUALLY ANY PRINTER! WITH A COMPREHENSIVE AND EASY-TO-FOLLOW USER MANUAL, VIZAWRITE IS THE ULTIMATE PERSONAL COMPUTER WORD PROCESSOR! AVAILABLE ON CARTRIDGE (**£69.95 £75!**), DISK (**£79.95 £68!**) OR WITH VIZASPELL (**£99.95 £85!**)

## Master 64

MASTER 64 IS A TOTALLY NEW CONCEPT... A COMPLETE PROGRAM DEVELOPMENT PACKAGE, THAT'S AVAILABLE NOW FOR THE CBM 64. MASTER HAS 85 NEW COMMANDS... AND BASIC IV TOO! PLUS PROGRAMMER'S TOOLKIT, MACHINE CODE MONITOR, BUSINESS BASIC, KEYED DISK ACCESS, MULTIPLE SCREENS, USER-DEFINABLE INPUT ZONES, REPORT GENERATOR, 22-PLACE ARITHMETIC, DISK DATA COMPRESSION, DATE CONTROL, SCREEN PLOT, SCREEN DUMP, AND MORE... EVERYTHING YOU NEED TO PROGRAM YOUR 64 TO TOP PROFESSIONAL STANDARDS! (**£149.95 £115!**)

## DEADLY **Chuckie egg!**™

**A FARMYARD ARCADE STYLE GAME!**

You have to collect 12 eggs and corn to finish the screen—but there are up to 4 nasty ducklings chasing you as you try to escape up the ladders. You can jump onto the moving lifts but make sure you get off before you smash your head against the roof.

The ducklings are on a fixed path but if you're good enough to reach frame 9, mother duck escapes from her golden cage and can move anywhere on the screen.

## Creative Sparks

Thorn EMI Computer Games have released a number of new titles with the creation of their new label, Creative Sparks.

There are two new games for the 64, both requiring joysticks. Slurpy is a cave-dwelling creature with an enormous appetite, and Black Hawk is an action game with a strategic element. Both cost £7.75.

For the unexpanded VIC there are two cartridge games costing £9.95. In Mine Madness you have to retrieve the treasure and in Mutant Herd your task is to protect the powerhouse from crazy mutants.

Three new games for the VIC require 8K RAM expansion. Available on cassette at £5.95, they are the action games Tower Of Evil, Tank Commander and Computer War – which is based on Thorn EMI's recent film War Games.

Finally there is Submarine Commander, an action game spread over three screens with scrolling in periscope mode. Costing £5.95, Submarine Commander is available on cassette and requires 16K RAM.

**Contact:** Creative Sparks, Thomson House, 296 Farnborough Road, Farnborough, Hants. Tel: 0252 543333.

## On the run

CRL's Omega Run is now available for the 64. Written by Richard Brisbane, the aim of the game is to guide your plane through enemy territory and destroy a base containing a doomsday device which has been captured by terrorists.

Available through traditional retail outlets and mail order, Omega Run costs £7.95.

**Contact:** CRL, CRL House, 9 Kings Yard, Carpenter's Road, London E15 2HD. Tel: 01-533 2918.

## In-house team for Virgin

Virgin Games are taking a step further from being just a software publisher with the creation of a small team of in-house programmers to develop 'unique creative' software. This expansion of operations does not mean the end of Virgin's publishing activities: the company are still offering their international sales and marketing network to other software houses who don't have the financial resources to do so themselves.

In the 12 months since the formation of Virgin Games, the company have released 40 computer game titles, securing four per cent of the software market. Ambush is the latest Virgin title for the 64. Costing £7.95, it's an arcade action game featuring a spaceship and attacking mutant aliens.

**Contact:** Virgin Games, 61/63 Portobello Road, London W11 3DD. Tel: 01-221 7535.

## Campaign

Boots are joining with Visions Software Factory to promote Demolator, a 64 compatible arcade game. It costs £6.95 and the promotion campaign which started in mid-April will run for six weeks.

**Contact:** Visions (Software Factory) Ltd, 1 Felgate Mews, Studland Street, London W6 9JT. Tel: 01-748 7478.

## New software from Commodore

Commodore have launched a new batch of software.

Tony Hart – Art Master, for the 64, costs £9.99 (cassette or disk) and enables you to draw, colour and save your pictures in high resolution.

New Commodore disk games for the 64 are Rail Boss and two adventure games – Zork I and Zork II. All three cost £11.99.

And finally for the 64 is Wizard of Wor. Available on cartridge at £9.99, this two-player game talks and simulates all the features of the arcade game.

For the unexpanded VIC, Commodore have launched

two cassette games, both at £4.99. They are Sir Hero and Rapier Punch.

Music Writer is for the expanded VIC and allows you to create, edit and save music in conventional notation. It costs £4.99 and is available on cassette.

Also on cassette for the expanded VIC at £4.99 are Nursery Rhymes and Stop Thief which uses the computer's identikit to create the burglar's face.

**Contact:** Commodore, 675 Ajax Avenue, Slough, Berks. Tel: 0753 79292.

## Hobbit guide

In response to the phenomenal success of Melbourne House's The Hobbit, the company have published "A Guide to Playing the Hobbit".

It helps to improve the understanding of the game and anyone from a complete beginner to an advanced adventurer will benefit. The book is divided into three sections: section one gives broad outlines on the general strategies and tactics in the game, and sections two and three offer more guidance together with detailed solutions to problems that may be encountered. It retails at £3.95 and is available in most bookshops.

**Contact:** Melbourne House (Publishers) Ltd, Castle Yard House, Castle Yard, Richmond TW10 6TF. Tel: 01-940 6064.

## Infidel

Infidel, the first game in the Infocom Tales of Adventure Series, is now available from Softsel for the 64. It comes on cassette for £35.95.

Set in the Egyptian desert, the player has to find the buried entrance to a pyramid and seize the treasures inside. A number of additional games pieces are included such as a manual of sorts, a map of the Nile river Valley and a hieroglyphics dictionary.

The creator of this epic adventure is Michael Berlyn and the game also features Interlogic so that players can use sentence commands with the aid of a 600-word vocabulary.

**Contact:** Softsel Computer Products, Softsel House, Central Way, Feltham TW14 0XQ, Middx. Tel: 01-844 2040.

*Welcome to this, the first issue of Commodore Games. This is planned to be a regular monthly supplement to Commodore Computing International, concentrating solely on games for Commodore machines. We'll be looking at all aspects of all sorts of games – publishing new ideas, reviewing games, answering your queries and bringing you all the latest games news. So if you feel you have anything to contribute or have any queries – whether about routines for arcade games or a bit of help in an*

# DUCKWORTH HOME COMPUTING

## CBM-64 PROGRAMS 1 edited by Nick Hampshire

This book provides the reader with useful and interesting programs for the 64. Topics covered include: Hi Res Graphics – Music – Games – Utilities – Sprites and User Defined Characters – Functional Programs, etc. There is a detailed explanation of Hi Res Graphics and the necessary machine code routines to implement them, along with demonstration programs. An exciting version of Star Trek is included as well as a full length adventure game. Among the functional programs is a Personal Information Retrieval package which enables you to create and manipulate up to 365 records.

Nick Hampshire is the publisher of *Commodore Computing International*.

£6.95

## SPRITES & SOUND ON THE COMMODORE 64 by Peter Gerrard

A comprehensive guide to using the extraordinary features of the Commodore 64, together with a full working explanation of the chips that make it possible: the 6581 Sound Interface Device and the 6566 Video Interface Chip, together with the processor that makes it all tick, the 6510.

Sections on programming your own musical instruments, producing sprite and programable character animation, make this the guide for users of the Commodore 64 who want to get the most from the special features of their computer.

Peter Gerrard, former editor of *Commodore Computing International*, is a regular contributor to *Personal Computer News*, *Which Micro?* and *Software Review*, and *Commodore Horizons*.

£6.95

## EXPLORING ADVENTURES ON THE COMMODORE 64 by Peter Gerrard

A complete look at the fabulous world of Adventure Games for your computer. Starting with an introduction to adventures, and their early history, it takes you gently through the basic programming necessary before you can start writing your own games.

Inputting information, room mapping, movement, vocabulary, and everything required to write an adventure game are explored in detail. There follow a number of scenarios, just to get you started, and finally three complete listings written especially for the 64, which will send you off into wonderful worlds where almost anything can happen. The three games listed in the book are available on one cassette at £7.95. The complete guide to adventure games: playing, writing and solving them. Peter Gerrard is the author of Romik's two top-selling adventure games — Fools Gold and Tomb of Xeiops.

£6.95

## EXPLORING ADVENTURES ON THE VIC by Peter Gerrard

As above but for the VIC. Two of the games require 16K expansion and the third 32K. A cassette containing all three games is also available at £7.95

£6.95

## THE COMPLETE 64 ROM DISASSEMBLY by Peter Gerrard and Kevin Bergin

This book is for anyone who has ever wondered how the Commodore 64 really works. Intended for the serious programmer, it includes fundamental memory maps, memory architecture maps, the disassembly itself and (for reference) the complete 6510 machine code instruction set.

Kevin Bergin is a regular contributor to *Personal Computer News*, *Commodore Horizons*, *Which Micro* and *Popular Computing Weekly*.

£5.95

## THE COMPLETE VIC ROM DISASSEMBLY by Peter Gerrard and Kevin Bergin

As above but for the VIC.

£5.95

## A POCKET HANDBOOK FOR THE COMMODORE 64 by Peter Gerrard and Danny Doyle

This book contains all the vital information you will need when using your 64. There are sections on: ASCII tables – Basic keywords – Basic error messages – Colour memory – Conversion tables – Disk commands – Disk error messages – Disk formats – Extramon listing – Flow charting – Hex/Dec convertor – Hyperbolic functions – Memory maps – Memory architecture – M/C instruction set – M/C mnemonics – Powers tables – Cartridge standards – Other output – Screen memory – Sound chip registers – Musical notes values – Sprite memory diagram. In short, everything you need to know about your machine.

£2.95

## A POCKET HANDBOOK FOR THE VIC by Peter Gerrard and Danny Doyle

As above but for the VIC.

£2.95

Write for a descriptive leaflet (with details of cassettes).

# Slinky vs Slurpy

A selection of recently-released arcade games for the VIC and the 64 designed to test your reflexes

## FLYING FEATHERS

In Flying Feathers a fisherman must shoot eagles as they swoop down and try to carry his fish away.

A panel at the bottom of the screen records the number of fish left (the player gets five to start with) and the score. There are two methods of shooting the birds. With the easiest one, the hunter places a cross near the bird using the joystick or keyboard and presses the fire button to shoot. The second involves more judgement, the fire button has to be kept pressed until the shot is over the target and then released. There are four skill levels for each shooting method—eight in total.

The graphics are realistic and a duck tells you when you are awarded a bonus fish. A high score table has space for nine people. It's enjoyable to play and should appeal to the young.

**Title:** Flying Feathers

**Programmer:** Terry Owen

**Company:** Bubble Bus Software, 87 High Street, Tonbridge, Kent. Tel: 0732 355962.

**Hardware:** CBM 64, cassette player, joystick optional

**Type of game:** Arcade

**Graphics:** \*\*\*\*

**Sound:** \*\*\*

**Playability:** \*\*\*

**Description:** Shoot the eagles using two types of firing

**Price:** £6.99

**CCI Rating:** \*\*\*

## CHARIOT RACE

To make the most of this game two players are needed, but it can still be enjoyed by an individual. Sinister and Dexter are the two charioteers and the aim is to reach the finishing line and push all the other chariots into the side.

Points are scored by destroying other chariots, the other player's chariot and going as fast as possible. The highest speed a chariot can go is 250 and if the chariot goes too slow, spectators throw destructive fireballs onto the track. There are twenty laps to complete and in each lap more chariots appear and start to fight back. On either side of the screen the current score and the chariots pushing power are shown, The number of laps completed, the speed and the highest score are depicted on top.

It's an exciting game and very good value.

**Title:** Chariots Race

**Programmer:** Paul Hope

**Company:** Micro-Antics, Little Home, Hawthorn Lane, Codsall, Wolverhampton. Tel: 0907 45147.

**Type of game:** Arcade

**Graphics:** \*\*\*\*

**Sound:** \*\*\*

**Playability:** \*\*\*\*

**Description:** Race chariots round twenty laps and knock rivals in to the side.

**Price:** £6.95

**CCI Rating:** \*\*\*\*

## NURSERY NIGHTMARE

This game bears an uncanny resemblance to Egbert by Games Machine, the only difference being that this one involves a maid, a baby and a milk bottle rather than Egbert and an egg.

The screen is divided into three. In the middle lane the player manipulates the maid who has to catch the baby, drop him to cross into the outer lane, collect the bottle and dash back to catch the baby before it falls. If it does fall angry Agnes eliminates the maid. There are three lives to each game. Nursery objects present a hazard and must be avoided. There are five levels and a player can only pass into one when the first one has been successfully completed.

The joystick control is smooth and the game is quite amusing to play.

**Title:** Nursery Nightmare

**Programmer:** Alan Osborne

**Company:** Cable Software, 52 Limbury Road, Luton, Bedfordshire LU3 2PL. Tel: 0582 591 493

**Hardware:** CBM 64, cassette recorder and joystick.

**Type of game:** Arcade

**Graphics:** \*\*

**Sound:** \*\*

**Playability:** \*\*\*

**Description:** Catch the baby, pick up milk bottle and feed it.

**Price:** £7.50

**CCI Rating:** \*\*

## ARE YOU OUR MASTER GAMER?

At the Commodore Show, to be held at London's Novotel (previously the Cunard) from 7 June to 9 June, Commodore Computing International will be looking for the CCI Master Gamer—giving you a chance to prove just how good you are at playing computer games.

We will have a selection of games which have been chosen to test your skills as a games player to the full. There will be lots of prizes and an overall grand prize which will be announced in the June issue. (We want to encourage women in computing so there will be some special

prizes). Entry forms will be available in the June issue of Commodore Computing International—we will be giving priority to those with entry forms so make sure you get your June issue of Commodore Computing International by placing an order with your newsagent now.

## MANIC MINER

Miner Willy has stumbled on a fortune, but to get to it he has to travel down through twenty underground caverns. The game follows the infamous Kong arcade game format with disintegrating platforms, innumerable obstacles and nasties like poisonous pansies, slime and manic mining robots. Each player gets three lives.

Each cavern has a theme – Menagerie, Abandoned Vitamin Works, Attack of the Mutant Telephones, Amoebatrone's Revenge until finally the Final Barrier is reached. The screen on which the game takes place is small in comparison to the screen surface and it seems that the game is a straight conversion from the Spectrum version – a pity. The collision detection of sprites was intensive and it was almost impossible to get past the first cavern because miner Willy kept exploding.

We were slightly disappointed by this game and although it contained some nice ideas and interesting sound effects, the 64 conversion was not quite good enough.

**Title:** Manic Miner

**Programmer:** Matthew Smith (conversion by Chris Lancaster)

**Contact:** Software Projects, Bear Brand Complex, Allerton Road, Woolton, Liverpool. Tel: 051 428 7990.

**Hardware:** CBM 64, cassette recorder and optional joystick

**Type of game:** Arcade

**Graphics:** \*\*\*

**Sound:** \*\*\*

**Playability:** \*\*\*

**Description:** Miner Willy must travel through 20 caverns avoiding nasties to reach the fortune.

**Price:** £7.95

**CCI Rating:** \*\*\*

## CHINESE JUGGLER

The graphics in this game are clever and give the game much of its appeal. Using a joystick, the player manipulates the oriental man to collect plates and place them on poles.

The graphics are so accurate that the juggler must move around obstacles and has to be in exactly the right position before picking a plate up. The plates have to be respun regularly and in each level the frequency at which they stop spinning increases. There are five colours and each one has a numeric value, for instance white is worth more points than purple. Extra points are also awarded for juggling tricks.

Once all the plates are spinning on the eight poles, a jolly musical fanfare announces the juggler's success and he is ready for the next level. The music is excellent and adds to the game's attractions. Play is against the clock and bonus points are awarded for completing each level within the time frame. There are ten levels to complete.

The game is amusing and it is not difficult to attain a reasonable standard quickly. In fact it is perhaps too easy. We managed to get a score which almost outgrew the available space!

**Title:** Chinese Juggler.

**Programmer:** Hungarian author.

**Company:** Ocean Software Ltd, Ralli Building, Stanley Street, Manchester. Tel: 061 832 9143.

**Hardware:** CBM 64, cassette player and joystick.

**Type of game:** Arcade.

**Graphics:** \*\*\*\*\*

**Sound:** \*\*\*\*

**Playability:** \*\*\*\*\*

**Description:** Simultaneously balance eight spinning plates within a time limit.

**Price:** £6.90

**CCI rating:** \*\*\*\*

## MR WIMPY

Mr Wimpy is based on the unlikely theme of making good hamburgers and is divided into two parts.

In the first part Mr Wimpy has to assemble the burger ingredients and to do so he has to cross the screen with a tray and collect the bread, ham and cheese. Manholes and burger thieves have to be avoided. Once they have all been successfully collected, the burgers have to be made. In the kitchen, Mr Wimpy has to make four burgers by freeing the ingredients – two bun halves, cheese, lettuce and ham in order from the four levels so that they fall into a pan at the bottom.

Kitchen rebels – eggs, pickles, sausages chase him, but he can throw pepper to defend himself, but there are only three chances unless he picks up the bonus gems. ice-cream or coffee which give him an extra chance to shoot. The screen shows the current score, highest score, number of lives left (there are three per game) and the number of peppers left.

Joystick control is sensitive, the graphics are colourful and fun and the

screen scrolling is smooth. A very good game.

**Title:** Mr Wimpy

**Programmer:** David Selwood

**Company:** Ocean Software Ltd, Ralli Building, Stanley Street, Manchester M3 5FD

**Hardware:** CBM 64, cassette recorder, joystick optional

**Type of game:** Arcade

**Graphics:** \*\*\*\*

**Sound:** \*\*

**Playability:** \*\*\*\*

**Description:** Guide Mr Wimpy in his task to make the best hamburgers in town

**Price:** £6.90

**CCI Rating:** \*\*\*\*

## BLACK HAWK

Conceived during the Falklands, the idea of this game is to guide the Black Hawk (the world's deadliest aircraft) across enemy territory to liberate a small group of islands. To get the most from this game you are advised to read the instruction leaflet very carefully. In theory, it is fairly complicated game with different weapons being made available to you as your score progresses. Unfortunately Black Hawk does not live up to expectations in practise.

Your plane is fitted with an on-board computer, with dual attack and defence screens. All this means is that the sprite changes.

The game suffers from an apparent lack of thought concerning the graphics. It's hard to take things seriously when tanks appear from out of the sea and when the scenes change so much that at one moment you are on the edge of water, but in the next instance it has gone. It is also irritating in the early stages of the game when each attack is broken up by the appearance of the introductory screen.

**Title:** Black Hawk

**Programmer:** Dean Lock

**Company:** Creative Sparks, Thomson House, 296 Farnborough Road, Farnborough, Hants. Tel: 0252 543333

**Hardware required:** 64, cassette recorder, joystick

**Type:** Action/strategy

**Graphics:** \*\*

**Sound:** \*\*

**Playability:** \*\*

**Description:** Aircraft mission to liberate small group of islands

**Price:** £7.95

**CCI rating:** \*\*

## SOFTWARE

**NEW** For the Commodore 64

### OLYMPIC SKIER

Thrill to the excitement of your own winter olympics with this great new game from the author of JACKPOT. Infact this program contains not one game but three. Manoeuvre through the gates on the SLALOM. Press your man to the limit on the SKI-JUMP and speed down the DOWNHILL course jumping and avoiding the obstacles in your way. 100% machine code, joystick or keyboard control.

**£5.99.**

All our CBM 64 programs are available on disk. Please allow £2.00 extra.

**NEW** For the Commodore 64

### GRAPHICS MASTER

Allows the user to define multi-colour graphics on the Commodore 64. The program allows both user defined characters and sprites to be made simultaneously and then saved to tape or disk. As well as offering the usual edit commands, common to many programs. GRAPHICS MASTER contains many unique commands including character scrolling, inverting and even the ability to rotate characters. Full user instructions provided. **£7.50**

## BUSINESS SOFTWARE

### ACCOUNTS PACKAGE

This series of programs is intended to provide the small to medium size business with a total accountancy package for use with the Commodore 64.

#### **PURCHASE LEDGER**

Up to three hundred purchase invoices may be recorded at a time, the data being stored on disk or cassette. The data can then be transferred to the PURCHASE ANALYSIS program for breakdown into months and years. Features include up to 100 supplier accounts and 50 nominal accounts, VAT inputs and printout facility **£25.00**

#### **SALES LEDGER**

Records up to three hundred invoices at a time, these can be transferred to the SALES ANALYSIS program for analysis. Features include printouts of your invoices, Current List, VAT outputs and customer accounts, up to 100 customer accounts may be used. **£25.00**

#### **SALES JOURNAL**

Designed specifically for use with a till for recording takings. Enter daily or weekly cash sales, cheque sales, other takings (non-sales) and returns. Printout facility with totals of cash takings to date, total cheques, total Gross sales and takings, total nett sales and takings, VAT output accounts. **£25.00**

#### **PURCHASE ANALYSIS**

This enables any number of invoices to be processed into monthly and annual breakdowns. Up to five years accounts at a time may be stored. The program allows storage of data and processing from any given month of that financial year. Nominal accounts are stored annually and a current creditor total recorded for use in the FINAL ACCOUNTS program. **£25.00**

#### **SALES ANALYSIS**

This program processes a data in the same way as the PURCHASE ANALYSIS, but there are no nominal accounts. **£25.00**

#### **FINAL ACCOUNTS**

The data from the SALES LEDGER and PURCHASE LEDGER can now be converted into actual final accounts, after being processed through the PURCHASE and SALES ANALYSIS programs. **£25.00**

## AZTEC CHALLENGE

A test of endurance – an Aztec warrior must prove himself by running and jumping through a series of levels beset with danger. Using the joystick, the player guides the warrior through each of the seven levels – the gauntlet, stairs, temple, vermin, tiles, piranha and finally the bridge.

Dangers include falling spears, cracks in the floor, spiked tiles and piranhas. The graphics, colour and sound are excellent and the warrior's hair rises every time he jumps. On each level the music changes and the size of the buildings indicates how advanced the warrior is in completing the level.

Once the player has successfully completed all seven levels he automatically goes onto the next phase of difficulty where the action is much faster. There are four phases in total. Two players can play and each level offers five lives, once the next level is achieved the game restarts at the same level. Aztec Challenge is as its title suggests an excellently challenging game.

**Title:** Aztec Challenge

**Programmer:** Paul Norman

**Contact:** Audiogenic Ltd, PO Box 88, Reading, Berks. Tel: 01-290 6044 or 0734 586334

**Hardware:** CBM 64, disk drive and joystick.

**Type of game:** Arcade.

**Graphics:** \*\*\*\*

**Sound:** \*\*\*\*\*

**Playability:** \*\*\*\*\*

**Description:** Aztec Warrior has to run and jump through seven levels avoiding traps and obstacles.

**Price:** On disk £12.95 and on cassette £8.95

**CCI Rating:** \*\*\*\*\*

## BOOGA-BOO (The Flea)

"Booga-Boo we love you" is the title to the game's introduction and it's true! This game just oozes with cuteness – with its little hopping flea and the strange world it inhabits.

The scene is set in a cavern containing weird, vegetation clad rocks. The graphics are bright and excitingly different – a demo at the beginning shows them off. The sprites are so exact that when Booga-boo falls over, his legs go all crooked looking very realistic.

The object of the game is to move the flea from the bottom of the cavern to the top. Using the joystick and the strength meter running along the bottom of the screen, the player manipulates the flea so that it hops from toadstool to ledge

up to the top avoiding the dragon and Venus flea trap. The screen scrolls left and right so that the best route to the top can be ascertained.

This game takes a bit of getting used to, but after a few tries, signs of improvement are obvious. The player only gets one life per game and every time the flea is eaten, the demo is shown. After the twentieth time it gets extremely tedious.

The graphics are vivid, the sounds very effective and the idea original, we loved the game and think most other people will too.

**Title:** Booga-Boo (the flea)

**Programmer:** Indescomp

**Contact:** Quicksilva Ltd, 13 Palmerstone Road, Southampton, SO1 1L1. Tel: 0703 20169.

**Hardware:** CBM 64, cassette recorder and joystick

**Type of game:** Arcade

**Graphics:** \*\*\*\*\*

**Sound:** \*\*\*

**Playability:** \*\*\*\*\*

**Description:** Manoeuvre Booga-boo from the bottom of the cavern to top avoiding the dragon and flea traps.

**Price:** £7.95

**CCI Rating:** \*\*\*\*\*

## SLINKY

Slinky is a coiled metal spring and the player uses a joystick to move over the 54 cubes making up the playfield, changing the colour of each one as he steps onto them.

Friends of the wizard: Rusty rust cloud, Ralph raindrop, Marge magnet and Charlie the oilcan pass across the screen and can damage him. For example if the rust cloud pass over Slinky he turns brown.

The player gets five lives and 25,000 points to start with. These points can be gained or lost, for instance Slinky loses 100 points every time he moves, but if he becomes rusty the same move costs him 500 points.

There are 99 levels and a comprehensive manual explains the scoring system. The program makes good use of multi-coloured sprites and some of the demos are very amusing. Sound has also been utilised effectively and when Slinky completes one level, a musical fanfare announces the fact together with a waving flag. We don't know what happens when you complete the 99th level, but I don't think the game creators do either!

It is compulsive playing and there are a lot of little extras which give the game

its overall attraction.

**Title:** Slinky

**Programmer:** Paul Norman

**Company:** Audiogenic Ltd, PO Box 88, Reading, Berks. Tel: 290 6044 or 0734 586334.

**Hardware:** CBM 64 or SX-64, disk drive or cassette recorder and joystick.

**Type of game:** Arcade

**Graphics:** \*\*\*\*

**Sound:** \*\*\*

**Playability:** \*\*\*\*\*

**Description:** Slinky the spring has to change the colour of the playfield and evade nasty creatures.

**Price:** On disk £12.95 and on cassette £8.95

**CCI Rating:** \*\*\*\*\*

## SLURPY

Slurpy is a lovable little cave-dwelling creature, born with a large snout-like mouth and an insatiable appetite. He is constantly under attack from various enemies and your task is to help him out-manoeuvre them, using the joystick, and gobble them up. Once the little fiends are in line with the vortex in front of Slurpy's mouth they are automatically sucked in, but watch out if they turn red – that means they are poisonous and will kill Slurpy unless he spits them out quickly. Another danger to look out for is the earthquakes which happen if you take too long in slurping up all the glowbugs. These cause the cave roof to collapse onto Slurpy.

The graphics are simple, but effective and there's probably a lot more to them

than meets the eye. The sounds incorporated are also amusingly realistic – you can see (or hear) why they call him Slurpy!

Although it's a relatively simple game, for one or two players, Slurpy brings a definite smile to your face and is mildly addictive.

**Title:** Slurpy

**Programmer:**

**Company:** Creative Sparks, Thomson House, 296 Farnborough Road, Farnborough, Hants. Tel: 0252 543333

**Hardware required:** 64, cassette recorder, joystick

**Type:** Arcade

**Graphics:** \*\*\*

**Sound:** \*\*\*\*

**Playability:** \*\*\*\*

**Description:** Help Slurpy out-maneuvre his enemies and eat them

**Price:** £7.95

**CCI rating:** \*\*\*\*

## METAGALACTIC LLAMA BATTLE AT THE EDGE OF TIME

Based as the title suggests on the edge of time, an observation outpost is being attacked by Zyxian cyborg arachnid mutants. The only means of defence are metallamas endowed with a phenomenal spitting ability.

By using a joystick, the player controls the camels movements and can aim the spit at the spiders as they descend, from threads on a force field which crosses the screen and drop to the ground. On the ground they change into Weeviloids and destroy the camel on

contact.

Strategy must be used – by aiming the spit at the force field and moving it up and down it can be directed onto the weeviloids, spiders and web threads. Points are awarded for shooting the creatures and a quota meter tells the player how far away the wave is. There are up to 99 levels of difficulty and 3 camels per game. The player's score and the highest score are displayed on the screen.

Good use is made of colour, graphics and sound and the game will appeal to most arcade game enthusiasts.

**Title:** Metagalactic llamas battle at the edge of time

**Programmer:** Jeff Minter

**Company:** Llamasoft, 49 Mount Pleasant, Tadley, Hants. Tel: 07356 4478

**Hardware:** Unexpanded VIC 20, cassette recorder, joystick

**Type of game:** Arcade

**Graphics:** \*\*\*\*

**Sound:** \*\*\*\*

**Playability:** \*\*\*\*

**Description:** Metallamas shoot spit at invading spiders and weeviloids

**Price:** £5.50

**CCI Rating:** \*\*\*\*

## COSMONAUT

A spaceship has crashed and the Cosmonaut must free it from the tractor beam by negotiating four successive levels, switching the beam off and returning to the ship.

Lifts take the cosmonaut down to each level, but patrolling stormtroopers fire arrows and must be avoided or killed. The game ends when the player loses all of his five lives or reaches the spaceship after completing his mission.

The colour scheme in the game is rather dull, but if the graphics were more brightly coloured it would be more appealing. The joystick control was not always as sensitive as it could have been and one annoying feature of the game is that if the cosmonaut is killed on the first level with a trooper nearby the next life is lost immediately as it just walks into him.

Points are awarded for events such as jumping on a stormtrooper or switching off a tractor beam and the players score is displayed alongside the highest score. The game is quite compelling and because there is a positive goal to be reached it would while away a few hours quite happily.

**Title:** Cosmonaut

**Programmer:** Clifford Ramshaw

**Company:** Melbourne House, Castle Yard House, Castle Yard, Richmond TW10 6TF. Tel: 01-940 6064.

**Hardware:** Unexpanded VIC 20,\* keyboard or joystick

**Type of game:** Arcade

**Graphics:** \*\*

**Sound:** \*\*

**Playability:** \*\*\*

**Description:** Negotiate four levels by killing or avoiding troopers and arrows to free the spaceship from a tractor beam.

**Price:** £5.95

**CCI Rating:** \*\*\*

## DICKYS DIAMONDS

One of the most original games we have seen and the author is featured in this months Cult of the programmers.

In Dickys Diamonds a spider builds a web between two trees and attaches a jewel in the centre. An owl then appears and his aim is to go over every part of the web turning it black, end up above the diamond and catch it as it falls. Strategy is necessary because the spider also moves around the web turning it white again and will kill the owl if it catches up with him.

To vary the games levels there are a number of game options – nine speeds, seven types of starting web and a yes/no choice of whether to have an unlimited number of flights for the owl and a second spider. If the player chooses to have a limited number of flights the owl can only pass over part of the web he has already been over thirteen times.

The screen displays the jewel score, number of flights left, the current score and the highest score. The graphics are often complemented by sound, for instance when the owl flies he beats his wings and there is a flapping sound. Dickys Diamonds would make a good addition to a games collection because it is so different.

**Title:** Dickys Diamonds

**Programmer:** Brian O'Shaughnessy

**Company:** Romik Software Ltd, 272 Argyll Avenue, Slough, Berks. Tel: 75 71535.

**Hardware:** CBM 64, cassette recorder, joystick

**Type of game:** Arcade

**Graphics:** \*\*\*

**Sound:** \*\*\*\*

**Playability:** \*\*\*\*

**Description:** Guide the owl round the spiders web and collect the diamonds.

**Price:** £6.99

## DETAILS

Level 9 Computing specialise in high, pure-text puzzle adventures with detailed scenery and a wealth of puzzles. All games have over 200 locations and a save game feature, and cost £9.90 inclusive.

### MIDDLE EARTH ADVENTURES

**1: COLOSSAL ADVENTURE.** A complete, full size version of the classic mainframe game "Adventure" with 70 bonus locations added.

### 2: ADVENTURE QUEST.

Centuries have passed since the time of Colossal Adventure and evil armies roam The Land. With cunning, you must overcome the many obstacles on the road to the Black Tower, source of their demonic power, and destroy it.

### 3: DUNGEON ADVENTURE.

The trilogy is completed by this massive adventure, set in the rich caves below the shattered Black Tower. A sense of humour is essential!

### THE FIRST SILICON DREAM ADVENTURE

**4: SNOWBALL.** The first of Pete Austin's second trilogy. The giant colony starship, Snowball 9, has been sabotaged and is heading for the sun in this giant game with 7000 locations.

### THE LORDS OF TIME SAGA

**7: LORDS OF TIME.** Our congratulations to Sue Gazzard for her super design of this new time travel adventure through the ages of world history. Chill to the ice-age, go romin' with Caesars legions, shed light on the Dark Ages. etc. etc.

# LEVEL 9 ADVENTURES

**BBC 32K COMMODORE 64 SPECTRUM 48K  
LYNX 48K NASCOM 32K ORIC 48K ATARI 32K**

Level 9 adventures are available at £9.90 from good computer shops, or mail order from us at no extra charge. Send order, or SAE for catalogue, to the address below - and please describe your micro.

## LEVEL 9 COMPUTING

Dept i, 229 Hughenden Road, High Wycombe, Bucks HP13 5PG

## REVIEWS

"Adventures which have a fast response time, are spectacular in the amount of detail and number of locations, and are available to cassette owners... Simply smashing!" - *Soft, Sept 83*

"Colossal Adventure is included in Practical Computing's top ten games choice for 1983: "Poetic and tough as hell." - *PC, Dec 83*

"To sum up, Adventure Quest is a wonderful program, fast, exciting and challenging. If you like adventures then this one is for you" - *NILUG issue 1.3*

"Dungeon Adventure is recommended. With more than 200 locations, 700 messages and 100 objects it will tease and delight!"

- *Educational Computing, Nov 83*

"Snowball... As in all Level 9's adventures, the real pleasure comes not from scoring points but in exploring the world in which the game is set and learning about its denizens... this program goes to prove that the mental pictures conjured up by a good textual adventure can be far more vivid than the graphics available on home computers."

- *Which Micro?, Feb 84*

"Lords of Time. This program, written by newcomer Sue Gazzard, joins my favourite series and is an extremely good addition to Level 9's consistently good catalogue... As we have come to expect from Level 9, the program is executed with wonderful style - none of those boring "You can't do that" messages! Highly recommended." - *PCW, 1st Feb 84*

# ADMAN ELECTRONICS

**Add on  
the Adman way**

Vic 20 computers have been talking back to their owners for quite some time. Now, Commodore 64 users can have that same pleasure too--by getting an ADMAN SPEECH SYNTHESISER! It's word power is endless as there is no set vocabulary. Yet operation is simple. The 64 elements of English speech are pre-programmed to let you put your words together as soon as you switch on. Just imagine.....you'll be able to program your own adventure games with characters that can actually talk.

**MANY LEADING SOFTWARE HOUSES ARE NOW DEVELOPING PROGRAMS THAT ARE COMPATIBLE WITH THE ADMAN 64 SPEECH SYNTHESISER. FIRST RELEASES ARE:**

Twin Kingdom Valley (Bug-Byte)  
Attack-Attack (Voyager)

For Vic 20 users there are also 8k and 16k RAM PACKS and a 3 PORT EXPANSION MOTHERBOARD.

**Prices around:**

8k Ram Pack . . . . . £29.95  
16k Ram Pack . . . . . £39.95  
Motherboard . . . . . £19.95  
Speech Synthesiser . . £49.95

The  
Commodore 64  
finds its voice!

**SPEECH SYNTHESISER NOW AVAILABLE FOR COMMODORE 64 PRICE AROUND £49.95**

Adman computer accessories are available from all good computer shops. For further information, why not take a lead from our speech synthesiser.....ask for it! See you local dealer or simply post the coupon.

**Dept. C, Adman Electronics Ltd., Ripon Way, Harrogate, N.Yorks, HG1 2AU. Tel. 0621 740972**

Please send me information on Adman Vic 20 Accessories

## THE WIZARD AND THE PRINCESS

A cross between an adventure and an arcade game, the story is that the wicked wizard has the princess captive in his castle. The game is divided into five parts and the player – the would be rescuer, must use arcade skills to negotiate each level and take the fair damsel away.

The keyboard is used for controlling the knight and in the first part he must find the castle. On completion of each level, pressing shift run/stop loads the next part and if one level proves too much for anyone it is possible to go straight onto the next one. At the end, the only way to get back to the beginning is to reload the whole game.

Once in the castle, a dragon has to be killed, a way through the labyrinth found and monsters slain. In the final part of the adventure, the player must do battle with a troll on a bridge while holding the princess.

The controls are sometimes annoyingly slow, but the idea of having a multi-part adventure game is a good one and this game will probably appeal to the younger generation.

**Name:** The Wizard and the Princess

**Programmer:** Clifford Ramshaw

**Company:** Melbourne House, Castle Yard House, Castle Yard, Richmond TW10 6TF. Tel: 940 6064.

**Hardware:** Unexpanded VIC 20, joystick, cassette recorder

**Type of game:** Arcade/adventure

**Graphics:** \*\*\*\*

**Playability:** \*\*\*\*

**Description:** Rescue the princess from the castle by negotiating five different game situations.

**Price:** £5.95

**CCI Rating:** \*\*\*\*

## NEOCLYPS

The planet Neoclyps has been invaded by baddies. Radar towers have been set up and the aliens fly around in the sky terrorising the populace.

The player guides a spaceship with the joystick and must zap both aliens and the towers. The joystick control could be more sensitive. There are four levels to choose from and each game has a supply of 12 spaceships. The best way to destroy a radar is to shoot an alien first as this gives the ship a striped shield and enables the ship to pass through buildings for four seconds.

The graphics are good, but rather dull – the landscape would be more interesting if it was brightly coloured. The radar smokes when it has exploded

– a nice touch. There are four quarks and the status board at the end of each game indicates the score, the region the player was in and the number of radars and aliens left. If you manage to clear the planet the player returns to even more aliens and towers.

Neoclyps is the sort of game that would fill a few spare hours very nicely.

**Title:** Neoclyps

**Company:** Personal Software Services, 452 Stoney Stanton Road, Coventry.

**Tel:** 0203 667556

**Hardware:** CBM 64, cassette recorder, joystick

**Type of game:** Arcade

**Graphics:** \*\*\*

**Sound:** \*\*

**Playability:** \*\*\*

**Description:** Destroy the alien spaceships and towers on the planet Neoclyps.

**Price:** £7.95

**CCI Rating:** \*\*\*

## FORBIDDEN FOREST

The hunter armed with a bow and arrow is in the forest and must defend himself against a series of attacks. Spiders, bumble bees, frogs, dragons, skeletons and finally the demogorgon assail him. The fire button on the joystick controls the arrows, but it takes such a long time for the arrows to reload, that the hunter spends most of the time running away.

There are four levels ranging from innocent to crazy and the complicated scoring system is explained in the manual. The graphics are three-dimensional and quite effective, but occasionally ragged round the edges. There are four forest areas for the hunter to move into and the moon passing across the sky, representing time is a nice effect.

There are some useful controls, for instance the player can start the game from where he left off rather than going to the beginning again. Quite a good game for those who enjoy fighting off different types of attack to reach a goal.

**Title:** Forbidden Forest

**Programmer:** Paul Norman

**Contact:** Audiogenic Ltd, PO Box 88, Reading, Berks. Tel: 01-290 6044 or 0734 586334

**Hardware:** CBM 64, disk drive and joystick

**Type of game:** Arcade

**Graphics:** \*\*\*

**Sound:** \*\*\*

**Playability:** \*\*\*\*

**Description:** Hunter fights off the

forest creatures by shooting them with his bow and arrow.

**Price:** On disk £12.95 and on cassette £8.95.

**CCI Rating:** \*\*\*

## MULTITRON

Multitron is an exciting game which inspires compulsive playing. The player is in command of a starfighter ship and must defend it from successive waves of space creatures by controlling the joystick or keyboard.

There are several levels, each one having to be completed before the player can move onto the next. There are seven types of creatures and each one has a slightly different way of approaching the attack, but they all drop bombs. The Meanies are the first assailants and worth ten points each, whereas the more aggressive Cosmic Phoenix is worth 75 points. An energy indicator on the screen shows the player how much power there is left in the laser cannon.

The final task in any level is steering the ship through a space corridor and if that is successful a bonus life is awarded. There are four to start with. There is no goal except to get onto the next level successfully. Good use is made of the graphics and the sound suits the game. A good game for the VIC if you like attack and evade tactics.

**Title:** Multitron

**Programmer:** T. Flanders

**Contact:** Sumlock Microwave, Royal London House, 198 Deansgate, Manchester

M3 3NE. Tel: 061-834 4233.

**Hardware:** Unexpanded VIC 20, cassette recorder, keyboard or joystick

**Type of game:** Arcade

**Graphics:** \*\*\*

**Sound:** \*\*

**Playability:** \*\*\*\*

**Description:** Defend a starship from seven types of space creature and steer a way through the space corridor.

**Price:** £7.95

**CCI Rating:** \*\*\*\*

# Games graphics

## A preview of Romik's Graphics Editor and a look at Adman's speech synthesiser for the 64

All good games need graphics and in the early days a prospective programmer would have had to spend hours with graph paper and a calculator to get a picture. To make life easier, Romik are bringing out the Graphics Editor which is due for release in the next couple of months. The program is divided into three parts – the character editor, the sprite editor and the screen editor. Although each one is a separate program, they can be combined. For example a picture can be created by using the screen editor with programmable characters from the character editor.

The manual is detailed and explains in a clear and precise style exactly what command facilities there are in each system. All the commands are single characters except for the screen editor, so that the controls are kept to a minimum. In each section, the letter controls are clearly listed alongside the appropriate function in the program. The program had been kept as simple as possible and is extremely user friendly – anyone familiar with the 64 would have very little trouble with it.

One of the advantages of having everything done for you by Romik's graphics editor is that the time saved can be used for other things – experimenting with different characters and sprites for example. Display screens in each section are used for the creation of pictures. The graphics can be moved around, inverted, scrolled, their size altered and the border and background

colours changed.

Attached to the cartridge is a lead which fits into the video port. It is built round a SP0256-AL2 speech processor chip which is preprogrammed to understand 64 allophones. (See our review of the VIC 20 version in March '84 issue for further information).

Adman's speech synthesiser is one of the first to be released with the backing of several software companies and Voyager, Crystal and Bug-byte have already released compatible software. The package contains a motherboard which slots into the cartridge port and a cartridge which fits onto the back of that.

Used in educational programs  
Adds speech to a number of games

# More than fun and games!

## CAESAR THE CAT

by Andromeda Software

**Y**ou will have more than fun and games when you meet Caesar, a cheeky young cat on duty in a well-stocked larder. He's kept busy chasing a gang of hungry mice eating the family's food. Playing against the clock, you guide Caesar along crowded shelves to pounce on the mice.

A fast, colourful, all-action,

arcade-style game which is winning praise from reviewers.

'A marvellous, truly addictive game which also manages to be original, it has few peers.' **Popular Computing Weekly**

'It's not possible to compare this game with anything I've seen before . . . Excellent.' **Soft**

'Lovely graphics, and a fine entry into the market from Mirrorsoft.' **Which Micro**

There's catchy music and a best-score record. Caesar the Cat is a challenge for high-scoring arcade addicts (has anyone reached a score of 10,000 yet?) as well as great fun for the novice.

Available on Cassette for the Commodore 64.

## QUICK THINKING!

by Widgeit Software

**T**wo mind-stretching, space-age games to test mental arithmetic and nimble fingers.

In **Sum Vaders** alien robots invade the earth. Only quick thinking and fast reactions can prevent them. Several levels of difficulty and a two-player game with a handicap option make Sum Vaders equally testing for all family members, from 8 years to adult.

**Robot Tables** challenges the young player to make a series of perfect robots. With a learning mode and a testing mode this

game is a fun way for early learners, and more advanced children, to master their multiplication tables.

Available now on cassette for the Commodore 64 (and also the Spectrum 48K, BBC B and Electron).

MIRRORSOFT programs are available from selected branches of W.H. Smith and Boots, and other leading software stockists. Trade enquiries welcome: phone 01-822 3580.

# The cult continues

A further look at the people behind the games

## Trevor Hall – Bug-Byte

Programmer Trevor Hall compares the computer game market with the music industry. He says: "The games market is tending towards the pop industry. There's a market for good rock records and also one for kids rubbish. Kids are getting more discerning in their choice of games, but they are still accepting rubbish."

Trevor, now 24, is the author of Bug-Byte's *Twin Kingdom Valley*, a new version of which has just been released to tie in with the new Adman speech synthesizer for the 64. All words which appear on the screen during the game are now voiced.

Two years passed from the original conception of *Twin Valley Kingdom* to its completion.

"It was written in stages like a book," says Trevor. "I tend to shelve one thing

and get on with writing something else. Usually I'm working on about two games at a time, and a game can take between six weeks to six months to write." Trevor then allows about two months for testing his games, usually letting his friends loose on them and improving them wherever possible.

Ideas come from experience and from keeping an eye on other games on the market. "I see what other people have done and then set out to do it ten times better and ten times faster," says Trevor. His experience in the world of computers began about five years ago with a degree in computer science. Trevor explains: "I got into computers because I was good at maths. At the time the only computer you could get was a PET. I became interested in micros because I could see a market there."

From there Trevor approached Bug-Byte who accepted and published his

material.

Programming is now a full time job for Trevor, but he now sticks to 'normal' working hours. "A few years ago I was working until two in the morning, but there's no point in killing yourself," he says.

Trevor is looking towards more realism in computer games and is keen on the idea of more 3D games. "We need to get past the stage of these half-baked flying saucers," he comments.

At present Trevor is putting the finishing touches to his next release. It is to be a trading game with the player as the last trader in a planetary system, each planet having its own economy. It's a mixture of adventure and arcade action, but space warfare can be avoided by those who don't enjoy 'zap, pow' games by bribing the marauding pirates.

Philip Mitchell is the man responsible for Melbourne House's *The Hobbit*, probably one of the most sophisticated adventure games on the market. Philip and some friends from Melbourne University originally got together with the intention of producing a better adventure system. The *Hobbit* story line came later.

Philip recalls: "The initial design of the system took six to eight months and then another ten months was spent in writing the story line. It took a long time to get the story working on the computer as there were a few things we weren't sure about. We had days when we did little but talk about ideas which wasted some time."

At 23, Philip has been programming for nine years, going back to his school days. His initial experience with computers came from building his own micros as a hobby, despite the fact that he has had no technical education. Studying for a degree in computer science, programming became a natural extension of Philip's interest in the world of computers.

"It's been my experience that people who have a background of work on the machines are more at home programming in Assembly language," says Philip. "It gives you a feeling of what is going on inside the computer."

When faced with deadlines, it is not unusual for Philip to be working 14 or 15 hours a day, six days a week, but as a rule he prefers to work an average of 35 to 40

Philip Mitchell –  
Melbourne House

hours a week. "I find that if I'm tired I don't work too well," says Philip. "At times it is better to take the whole day off."

Philip's next big project is the follow up to *The Hobbit*, another adventure story, but "bigger and better". This time the story is to be based on the Sherlock Holmes characters. Philip explains: "It's not based on any particular Holmes story, but the characters within the stories. The player is Holmes and the game has got all the atmosphere of Conan Doyle's books."

Philip predicts that in the next few years the personal computer as we now know it will become extremely powerful and cheap enough for everyone to afford, offering potential for some really sophisticated games. "There are so many things I want to do in the games area that my time is booked up for the next ten years," says Philip, at the same time admitting that the computer market changes very quickly. He adds: "I take things as they come. In this industry ten years is a long time – it's impossible to predict the next six months."

**NEW UNEXPANDED VIC 20 GAMES DESIGNER**

# MAKE GREAT GAMES....

Create your own amazing games with Galactic's unique **GAMES DESIGNER** cassette for the unexpanded VIC 20, only **£9.50** including post and packing

**ONLY £9.50**  
inc. p.p.

**\*No Programming experience Needed \***

With the GAMES DESIGNER you make your own machine code games. You can design all the Graphics, Screen layouts, Theme tunes, Explosions, Sound effects, Player speed, Alien speed, Skill level, Personalised game credits, Scoring values, Keys used, Number of lives, Intelligence of aliens, — whats more no programming experience needed.

Also includes 3 sample games:-  
KANGA, ZYON and KRAZY MAZE.

PLEASE SEND ME A GAMES DESIGNER CASSETTE FOR THE UNEXPANDED VIC 20 AT £9.50 inc. P.P.

- ★ Create your very own Games

## Brian O'Shaughnessy – Romik

After studying electronics, unemployment forced 26-year-old Brian O'Shaughnessy to move down to London in search of work. He became an engineer and learnt about micros inside and out, repairing them during working hours and playing with them at lunchtimes and after work. Brian began programming his own material in the evenings, first on the almost forgotten UK101 computer, followed by a PET, the VIC and then the 64. "In fact as a new computer appears I have to buy it," jokes Brian.

Romik's Dickys Diamonds was written by Brian and therein lies a tale. Dicky, the little owl character, was not originally intended to be an owl. Brian explains:

"My original idea was to have a dragonfly in the game but the wings are too long! Once I had decided on the owl, I spent hours looking through animal encyclopaedias in search of the perfect shape."

Dicky is now Brian's trade mark and will probably appear somewhere in all his future games. Dicky even makes a brief appearance in Brian's Graphics Editor, designed to enable people to create their own graphics and save them for use in their own games. (The Graphics Editor will shortly be released by Romik and is reviewed elsewhere in this issue.)

Brian has set himself a target of writing six games a year. He feels his background knowledge of computers is

## Dean Lock – Creative Sparks

Dean Lock had never seen a micro before his temporary employment with Thorn EMI as a student preparing the story boards for games. "At college we had a main frame computer with punch cards," says Dean. "That's what I thought all computers were like."

Now Dean is in charge of all 64 games for Thorn EMI's new computer games label, Creative Sparks. After initially playing computer/video games

in his lunch hour and after work, Dean now gets sick of the sight of his games by the time they are finished.

Thorn EMI give their programmers six to eight months for each game, which sounds quite a long time when you're working full time on it. Dean explains that the first three to four months are taken up with the nuts and bolts of programming the game and the rest of the time is taken in tuning the game to meet everybody's tastes – "you have to ferment a game like wine", says Dean. "A good game should be like a record. You can happily play it 30 times when you first buy it and then play it again at a later date."

The idea for Dean's latest game to be released on the Creative Sparks label, Black Hawk, germinated in the midst of the Falklands.

Dean's method of writing games sounds a bit long-winded – he uses three different machines – but it works for him. "I start off using the Atari for its editor/assembler," says Dean. "Then I download onto the VIC which I use as an RS232, and then from the VIC to the 64

invaluable in programming.

"I've never been on any programming courses, but I do know how a computer works. When working on a game, I decide what I want to do and then use the computer to its full capabilities," says Brian. He writes each section of the program separately and tests each part as he goes along. "A lot of people write games in a hurry," comments Brian. "It takes five times as long to sort it out and you have a program full of bugs that is no good to anybody. It's best to work out everything in your head before typing anything into the computer."

For many programmers, the excitement of playing computer games is lost once they know how they work. The same is true for Brian. "I play my games so much in testing them that by the time I'm half way through I'm sick of the sight of it. Three-quarters of the way through I start thinking about what I want to work on next."

Programming takes up a fair amount of Brian's time. For six days a week he works from 9am – 6.30pm and then from 8-11pm on three evenings. But Wednesdays are a day off and computers are then a forbidden subject. In addition to all this programming, Brian is still finding the time to build his own disk drive. It is far too expensive to consider marketing, but it is a great programming aid to Brian allowing him to assemble programs at a far greater speed.

for its excellent graphics."

Many programmers seem to spend their entire existence at the keyboards of their computers – not Dean. "Two years ago I was trying to prove myself as a programmer working for 12 hours a day," he says. "At 25 I'm a bit too long in the tooth for that. I've got to stay sane, so now I work as many hours as anyone else – about 37 hours a week."

Games are now played during work hours only.

Although, like most programmers, Dean does not claim to have made his fortune just yet he does receive a basic salary in addition to various bonuses – bonuses for the number of months in service in the company and bonuses for the number of his games sold. So it isn't an unlikely occurrence to receive a £7000 bonus for the month. I wouldn't complain!

Looking to the future Dean says: "I'd like to become involved with video disc games. You can use real life footage with superimposed computer animation. That could lead to some really interesting adventure games."

## NEW ORIGINAL GAMES FOR THE COMMODORE 64

- NIGHTMARE PARK** is in fact a compendium of 14 games. The task of the user is to gain as many points as possible travelling through a maze beset by obstacles at every turn. These infuriating obstacles are overcome by a combination of skill, sharp reflexes or by sheer good luck making Nightmare Park a suitable game for all ages. **PRICE £7.99**
- DOTS & BOXES** is an intelligent game where the user and the computer take turns in completing boxes by drawing a line between two dots. The aim of the game is to win the most boxes whilst skilfully minimising the number of boxes given away to the computer. **PRICE £6.95**
- CHOPPER LAND** Your chopper is chartered to transfer goods from your base and land SAFELY. An exciting new game full of surprises. **£7.99**

# 1 VOUCHER

- HEXAPAWN** For strategic and persistent play. The opponent (computer) has no initial strategy but is programmed to learn from the user's wins to improve its own strategy. **£5.95**

Order any of these games and send 2 vouchers to receive your free copy of Hexapawn.

## A great line up of 17 NEW titles... direct from CANADA

FOR ZX81, SPECTRUM, VIC 20, C64, ATARI!

Just run your eyes over these new titles now available through "SOFTCHOICE LTD" the U.K. subsidiary of the well-known Canadian Software House INTERNATIONAL PUBLISHING & SOFTWARE INC. Purchase with confidence superb EDUCATIONAL, UTILITY and GAMES SOFTWARE!

### EXCITING NEW GAMES FOR FAMILY FUN AND LEARNING FOR ZX81 and SPECTRUM

**ADDING MACHINE**  
 Additional facts for ages 5-9 yrs.  
 For Spectrum.  
 Cassette £6.95

**TAKE AWAY ZOO**  
 Subtraction facts for ages 5-9 yrs.  
 For Spectrum.  
 Cassette £6.95

**TINY LOGO**  
 The key to understanding and learning real computer programming!  
 For ZX81.  
 Cassette £5.95

**SIGNALS & CODE**  
 See and hear the letters and numbers in order! On demand, randomly, in score tests! For ZX81.  
 Cassette £4.95

**WRATH OF KONG**  
 Only great agility and cunning will outwit Kong - Climb quickly or Jane will perish!  
 For ZX81 & Spectrum.  
 Cassette £5.95

**SPEED SNAKE**  
 Slither around mazes. 10 different mazes to challenge your skill! Deadly!  
 For ZX81.  
 Cassette £4.95

**MR MUNCHEE**  
 Race through 3 mazes, avoid the Trolls! Exciting action with graphics!  
 For ZX81.  
 Cassette £4.95

### CHILDRENS' & HOME EDUCATIONAL GAMES for the COMMODORE 64, ATARI 400/800

DISKS Only, at £14.95 each incl.

**THE ALPHABET FACTORY**  
 Two arcade-style games that teach children the alphabet!  
 C64 + Atari.  
 Ages 3-8 years.

**MATCH UP**  
 These high interest games make learning to read fun!  
 C64 only.  
 Ages 3-8 years.

**THE WORD BIRD**  
 Three different games each designed to increase a child's reading vocabulary!  
 C64 only.  
 Ages 6-12 years.

**TIME ZONE**  
 Two activity games that develop the needed language skills for successful reading!  
 C64 only.  
 Ages 6-12 years.

**BRIDGE**  
 For all the family. Sharpen your skills with the computer's bidding!  
 VIC 20, C64, & ZX81.  
 Cassette £9.50

### GREAT UTILITY AND BUSINESS SOFTWARE for ZX81, SPECTRUM, VIC 20, COMMODORE 64, ATARI

**FASTWORD**  
 Fast, versatile and complete word processing package by Dr Pearson.  
 For ZX81.  
 Cassette £7.50

**FASTLOAD**  
 any programme up to 6 times faster than normal! By Dr G. Pearson.  
 For ZX81.  
 Cassette £7.50

**DIET**  
 Gain control over your eating patterns. By Dr M. Minsky.  
 For ZX81 & Spectrum.  
 Cassette £5.95

**CALC-PRO**  
 A great tool for home or business! complete financial spreadsheet & runs statistics programs  
 VIC 20 Cassette £9.50  
 C64 Disk £14.95

**GRAPH-IT**  
 An easy to use tool to produce graphical displays.  
 For VIC 20, Cassette £9.50

# Hobbit revealed

**Bilbo Baggins is really up against it. After three months he's conquered 40 per cent of the game on his 64, then some guy by the name of Elkan (a Tolkien invention, if ever there was one – and there were, as we all know, a few!) comes up with a book that spoils all the fun.**

At least that's what it looks like at first. A Guide to Playing The Hobbit. What could be better designed for spoiling the fun? Every time you get stuck you can turn to the book. Even worse, it might be possible to play your way all through the game with this book.

Fortunately Bilbo has nothing to worry about. The book isn't quite like that. For one thing you have to be pretty familiar with the game to understand the book. It doesn't give away everything – at least not all at once. David Elkan has given clues and hints here and there without spelling everything out. But if you're one of those who can't resist looking at the answers to the crossword before you've worked them out for yourself he's provided an obstacle.

In The Hobbit Help section of the book David Elkan has expanded on the Help given in the game. In case you're tempted to look too far ahead he's used a code that's very simple but which involves just enough work to stop you from going too far too soon.

The Hobbit Help section is the middle chapter of the book. The first is an

introduction to the game, more or less an expansion of the mini-manual that comes with the game. The third and final chapter is A Tourist's Guide to Wilderland. It's a guide to most of the game's locations and solutions to the problems encountered in each location. This is the part of the book that might have really bugged Bilbo. It gives you the answers and could make the thing too easy.

Luckily for Bilbo the game comes to it's own rescue. Part of the magic of The Hobbit is its unpredictability. Eventually, of course, you'll get the whole thing sussed out. After all, it is finite! But there are enough alternatives and enough changes from game to game to make it fun even with a book like A Guide to Playing The Hobbit.

Since Melbourne House publish the book and also publish the game you can rest assured that it doesn't spoil the game. Otherwise their sales of both the book and game would dwindle. But wait! Perhaps there those who know not The Hobbit – neither the original book by JRR Tolkien or the computer game.

Tolkien was a master of his art and The Hobbit is an excellent tale. It serves as a wonderful introduction to The Lord of the Rings – a trilogy that some thought was one of the best pieces of fiction written in English.

It's one of those classic tales of good versus evil, a fantasy in which strange creatures such as dwarves and elves inhabit Middle Earth.

It's a marvellous book and The Hobbit is a superb game. Probably the best adventure game in the UK. How you feel about A Guide to Playing The Hobbit depends very much on how you feel about the game. If you have enjoyed the game and feel you have got everything out of it that there is to get out of it then you'll probably find the book very interesting. A couple of Hobbit addicts in the office who have been playing the game on and off for a couple of months were astounded to find screens they'd never seen. If you've become completely frustrated by the game and can't get out of the Elvenkings' dungeons then this book will be just like a golden key –

One final word about the price of this paperback (£3.95). OUCH!

# What's in a name?

In the first issue of **Commodore Games** we define the many and varied games categories

Amusement arcades have been with us for many years now, their contents changing from the one-armed bandits and mechanical 'shove-halfpenny' games to the more recent Space Invaders and suchlike. The cost of playing these games has also changed dramatically from the old one-penny to the new 20 pence, but that has never affected their popularity.

Just a few years ago, people had the opportunity to play electronic games in the comfort of their own home with the appearance of TV games – a relatively cheap little 'box' which was attached to the television. Many were content to while away the hours knocking a small square from one end of the screen to the other with a rectangular shape – this was TV tennis.

Technology moves fast and now, with the emergence of sophisticated computer games, it is hard to believe that anyone could have found enjoyment in those slow repetitive games.

The earliest computer games available were computer versions of the popular arcade games – the obligatory Space Invaders and Pac-Man. Now games players are spoilt for choice with a growing list of games falling into numerous categories: arcade, adventure, arcade/adventure, simulation, sport, action/strategy, educational and even semi-educational!

The list is steadily expanding as software houses come up with ideas for original categories to boost sales of their games. How do you define which category a game belongs to? Is there any real difference between simulation and sport, or arcade and action/strategy? In this first issue of **Commodore Games** we will try to define these categories.

## Arcade

Arcade games have been around for the longest period of time and still account for the largest share of the software market. Most people define arcade games as a 'zap! pow!' game, something like Space Invaders – basically to shoot anything on the screen before it kills you. However the arcade category is rather more general than that, covering any game where the player has to move

an object around the screen, such as in maze games like Pac-Man.

Arcade games test your reflexes.

## Action/strategy

A new breed of game is apparently emerging under the category action/strategy. However we can see no difference between this new category and arcade games. Being marketed under this category is Creative Sparks' Black Hawk, in which your task is to guide your fighter-plane across enemy territory to liberate a small group of islands.

## Adventure

Adventure games vary from the simple adventure to a really sophisticated game. This category can be further divided into three smaller categories: text adventures, graphics adventures, and a cross between the two.

Text adventures, as the name implies, consist purely of screen text as in Romik's Sword of Hrakel adventure. The computer describes your surroundings and asks you what you want to do. Whether you want to move north, east or west, or even up and down. Also what to do when confronted with an object, be it a golden key or a rabid wolf.

Graphics adventures are those where you are dependent on the graphics to play the game. For example Krystals of Zong from PSS, where you have to guide your man around the maze picking up the keys that will enable him to get to the treasure. However some may define this game as an arcade adventure! Confused? Read on.

Then, of course, there are adventure games which combine both text and graphics. Melbourne House's The Hobbit is a good example of this, illustrating your every move.

On the whole, adventure games are designed to test your powers of logic rather than your reflexes.

## Arcade/adventures

This category includes those games which combine adventure with an

element of arcade action. These require both logic and good reflexes.

Unfortunately if you are not very good at adventures you may never reach the arcade stage. Likewise, if adventures are your speciality, you may be killed before you can continue your adventure.

Bug-Byte will soon be launching a trading game where you are the last trader in a planetary system. Arcade action comes in the form of marauding pirates, but this can be avoided by bribery!

## Sports

It is sometimes hard to differentiate between the sports and the simulation category. Falling into the sports category are games such as the computerised table football game from Bubble Bus. Using the joystick and fire button you determine which handle you wish to move and in which direction. A more sophisticated football game comes from Commodore themselves, with the player controlling an eleven-strong team complete with cheering crowds and even the presentation of a cup.

Football is just one of the sports with a computerised equivalent.

## Simulation

The only difference between this category and sports programs is that in a simulation program you take on a role. The best example is probably found in flight simulation programs where you become a pilot taking off and landing your plane.

Anger Productions have released what they are terming business simulation programs. In their flight simulator you are required not only to pilot the plane, but also to plan a route taking into account factors such as fuel. A simulation/adventure?!

## Education

Educational programs are fairly self-explanatory, basically they teach you how to do something. Usually aimed at the very young, there are numerous educational programs on the market which teach the player how to read, write, spell and count, combining learning with a games element.

# What's in a game?

**In this section, we are going to take a look at how a game is made up. To demonstrate this we have a game called MOONLANDER for the VIC-20 (any expansion). We will look at this program very carefully and explain what the separate routines do.**

### Description

The first thing to look at is what the game is supposed to do. In this example, it is a simple simulation game where you control the thrust from your ship's engines in an effort to make a successful landing. The thrust values are from 0 (no thrust) to 9 (maximum thrust) where a value of 5 will keep constant speed.

You must land with a speed of 15 or less km/h (units).

In Moonlander, the ship is displayed in the middle of the screen and on the left is a box containing all of the values (parameters) required to land.

The parameters are for fuel left, height from ground, speed, and time.

### Display

The display must then be worked out.

### The Program

Now for a routine by routine explanation of the game. A less detailed description appears in the REMs that do not need to be typed in.

# Games for the 64

This month we have two programs for the 64. The first is a short game called Q\*BERT written by N Cooper. The other game is a maze game which creates a random maze and then allows you to move through the maze using the keys 'F' for forward, 'R' to turn right, 'L' to turn left.

## Q\*BERT

Written by N Cooper, this game is a 64 version of the arcade game of the same name. The movement is obtained by the keys:

'T' up & left  
'V' down & left  
'U' up & right  
'N' down & right

Or by the joystick in port 2 using the diagonals.

The object of the game is to jump

onto the non-coloured squares. When all the squares have been coloured, the pyramid will be re-drawn and your task will re-start.

Beware of the white ball which will cause loss of a life if it hits you, and don't jump off the edge of the pyramid unless onto one of the floating disks which will lift you up and drop you safely onto the top square.

Start the game by pressing any key.

```

## MAZE

In this game, the object is to move from one side of the maze to the other. It is fully REMed so that it could be used in your own games. The movement is obtained by using the keys:

'F' forward one location  
'R' rotate 90% to the right  
'L' rotate 90% to the left

The maze is totally random and the view of the maze is given using the 64s characters to produce a 3D view.

You start on one side of the maze and move to the other. You are facing in the correct direction to start, but will need to remember which direction you are facing otherwise you will get lost.

## DON'T LAUGH. FIVE MINUTES OF ALLEY-OOPS AND YOU WON'T BE ABLE TO TAKE YOUR EYES OFF IT.

Oh sure—it might look silly now. But wait! It's hurtling toward you, threatening to destroy your perfect game. You'll take it seriously then. And bowling shoes won't be your only worry. You'll also have to watch for diabolical beer bottles, evil pin sweeps and vicious gum spots.

Sound strange? Sure. But battling such weird objects is exactly what makes Alley-Oops so original. And so incredibly fun to play.

Alley-Oops is real arcade stuff. In fact, it's a challenge just to get to the next level of play. And there are 8 levels, the last one being the nearly impossible Challenge Round.

There are all kinds of ways to play Alley-Oops—try to mount up points, score a perfect game or reach that highest level. Whichever way you choose, you'll have endless fun playing Alley-Oops.

Just remember—don't take the bowling shoes lightly. After years of being kicked around bowling alleys, they're out to get even.

## NOW AVAILABLE FOR YOUR CBM 64 HIT AND RUN

*For all cricket fans, Sunday league cricket for your 64.*

One or Two player games allows you to captain and select your team in a **40** overs innings match. **30** players available for selection which offers literally million of permutations. Conditions vary from match to match. Includes **run-outs, wides, no-balls, byes and leg-byes**. Man of the match decision at end of each match. Captain of batting side has the opportunity to adjust his tactics at intervals of 7 overs or at the fall of a wicket. The captain of the fielding side can adjust his tactics at the end of each over. As in Sunday league cricket bowlers are limited to 8 overs and may not bowl two successive overs. Batsmen improve as their innings grows whereas fatigue can make bowlers and fielders less effective.

*A very addictive game, excellently written by David T. Coates. A must for all cricket fans.*

On cassette only **£7.95**

On disc only **£9.50**

*Please include 50p postage and packing.*

**A large selection of software as available for your 64 including:**

China Miner — **£7.00** Metamorphosis — **£7.95** Mission on — **£7.95** Mothership — **£6.96** Zyborian Terror (adventure) **£7.50**

*Please include 50p postage and packing when ordering these titles.  
SAE for complete list.*

**BYTEWELL**

203 Court Road, Barry  
South Glamorgan CF6 7EW.  
0446-742491.

# CBM 64— VICPRINTER

for only £79.90 fully inc!

"Very good – and good value too" *Commodore User Review* Dec. 1983  
PROBABLY THE WORLD'S CHEAPEST VIC/64 PRINTER, but better print quality than printers three times the price! Put the superb ALPHACOM-32 Printer on your VIC/64 using the

## SOFTEX PRINTERFACE

Printerface alone only ... £20.95 fully inc!  
Alphacom system complete only ... £79.90 fully inc!  
VIC Word processor package only ... £9.95 fully inc! (64 version T.B.A.)

- Alphacom-32 printer already established in W. H. Smiths, John Menzies: RRP £59.95.
- Not a plotter, but a fast dot matrix printer!
- Prints in blue or black on economical white paper (costs 1.3p per foot).
- Very robust and hardwearing! Gives consistent, high quality print.
- Silent but fast: up to 90 characters per second.
- Full VIC/64 graphics as well as user defined characters.
- 64 column printer with superb formatting facilities.
- Excellent high resolution graphics.
- Operating commands same as Commodore VIC/64 printer.
- Works on Sinclairs ZX-Printer (needs ZX-Power supply: £5.95 fully inc.).
- FAST DELIVERY – FRIENDLY BACK-UP – SIMPLE TO USE!

COMMODORE 64

OXFORD  
PASCAL

## YOUR FUTURE WITH COMPUTERS DEPENDS ON PASCAL

### BECAUSE

- PASCAL is the world's most popular programming language after BASIC
- PASCAL is FAST ... up to 20 times the speed of BASIC

### WHAT IS OXFORD PASCAL?

OXFORD PASCAL is a COMPLETE implementation of the popular programming language PASCAL running on the Commodore 64

### GRAPHICS & SOUND

With the OXFORD extensions to PASCAL you can programme dazzling graphics and astounding sound

### WHAT DO I GET?

With the cassette version of OXFORD PASCAL you get:

- A powerful text editor for preparing PASCAL programs
- A resident compiler giving 14k of user RAM
- A powerful set of colour graphics and sound extensions to standard PASCAL

With the disk version of OXFORD PASCAL you get:

- All the above, PLUS
- A full disk to disk compiler exploiting the entire memory of the 64 for PASCAL programs.

### HOW MUCH DOES OXFORD PASCAL COST?

Cassette version (resident compiler only) ..... £14.95  
Full disk compiler (1541, 4040, 8050, 8250 drives) ..... £49.95  
Prices are exclusive of VAT. There is also a small charge for post and packing.

# 64 adventures

This is a game by Toby Hughes, 13 years old from Reigate. It's a sort of adventure game which involves the Transmat – a machine similar to the one used by Captain Kirk and his crew on the Starship Enterprise. Remember Kirk's phrase "Beat me up, Scottie,"?

# SUPERSOFT

*the name to remember*

## for games

For only £8.95 you can buy a game that's exciting, soothing, and frustratingly addictive – all at the same time! STIX looks so different and sounds so different from all those other games that it will seem like being in another dimension when you sit down to play.

CRAZY KONG £8.95

WILDFIRE £6.95

HALLS OF DEATH £8.95

## for business

Show your computer who's master with BUSICALC! Spreadsheet programs are used by large and small businesses to juggle with figures, prepare reports and so on. Some are very powerful indeed. The problem is that they're difficult to learn, and tricky to use – which is why we came up with the BUSICALC series.

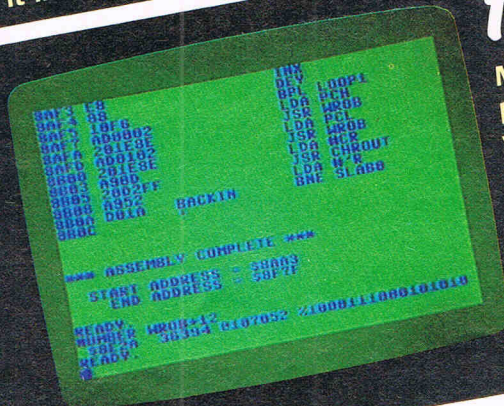

Whether you choose BUSICALC 1, BUSICALC 2, or BUSICALC 3 you'll get a program you can understand – and one that almost seems to understand you. Use it in the home, use it for teaching, use it at work – it'll save you time and money.

## for programmers

MIKRO is a full 6502/6510 ASSEMBLER with the power that professional programmers need, yet so simple to use that we recommend it to beginners! The MIKRO cartridge has many other facilities including editing commands and a machine language monitor, all for £57.50.

There's much more for the 64 in the SUPERSOFT catalogue. Ask your computer dealer for a copy, or phone 01-861 1166.

# PARAMOUNT SOFTWARE

## for Connoisseurs with COMMODORES

### COUNTDOWN

Time is important. Accuracy essential. Courage mandatory. But, above all, Nerve is the prime attribute needed for your mission as an agent in the crack S.M.U. A Superb Arcade / Graphical Adventure. VIC 20 8K or 16K Expansion. Keyboard or Joystick.

**£5.50**

### OUTBACK

"....an addictive game...the Graphics are very good indeed ...there's also a lot of very good programming." Personal Computer News. Dec22-Jan 4 1984.

Can you use the very sophisticated defence set-up to beat off the cunning Swagmen ?

Pure Machine Code Action. Fully Featured. Superb colour and Graphics.

A game with a difference. Any VIC20 Joystick. COMMODORE 64 Keyboard or Joystick.

**£5.50 & £7.50**

### CHOCABLOC

A fast moving, pure Machine Code action game, with Chocabloc our hero trying to sort out some Real Cool Choc Bars — until everything goes crazy and the action is on! Arcade standard. Fully Featured. Excellent sound and graphics. VIC 20 8K or 16K expansion. Keyboard or Joystick.

**£6.50**

### MEGAWARZ

Where does your fantasy go when your mind leaves your body ? Megawarz will take you there you can be sure. High resolution, multi-colour graphics. Sprite graphics. Synthysound. Pure Machine Code action. Arcade Standard. A magical planetary trip. COMMODORE 64 Keyboard or Joystick.

**£7.50**

### JOGGER

Truly a jogger amongst joggers. If you have trotted with the rest, now run with the best. Machine Code action. Superlative sound. Creative Colour. A quality programme from Paramount. Any VIC 20. Joystick.

**£5.50**
